DESIGNATION & RESOURCE CONSENT CONDITIONS 30 October 2018

NOTE: Changes shown in yellow highlight are new text proposed by the NZ Transport Agency following the close of the hearing on 24 October 2018 and have not been reviewed by other parties

DEFINITIONS DESIG	GNATION AND RESOURCE CONSENT CONDITIONS	
ADP	Accidental Discovery Protocol	
AEE	Assessment of Effects on the Environment Report	
CDMP	Construction Dust Management Plan	
СЕМР	Construction Environmental Management Plan	
Certification	The process of the Requiring Authority or Consent Holder submitting to the NPDC or TRC a report or an amendment to a management plan, a design, or a drawing for technical confirmation that it complies with the technical requirements of these designation or resource consent conditions and the management plan to which the design or drawings relate.	
CLMP	Contaminated Land Management Plan	
Completion of Construction Works	When Construction Works for the Project are complete. Completion of the restoration plantings required under Condition 29(a) and the riparian plantings required under Condition 29(g) may occur after Completion of Construction Works. The Requiring Authority shall advise the Planning Lead (or Nominee) of the Completion of Construction Works in accordance with Condition 43.	
Consent Holder	NZ Transport Agency	
Construction Work(s)	Main construction works, including: ground improvement works; temporary and permanent drainage installation; bulk earthworks (including cut and fill activities); bridge and tunnel construction; pavements and surfacing; site reinstatement; landscaping; and installation of permanent road furniture and ancillary works.	
СММР	Construction Noise Management Plan	
СТМР	Construction Traffic Management Plan	
СОРТТМ	NZ Transport Agency Code of Practice for Temporary Traffic Management	
СТМР	Construction Traffic Management Plan	
CWMP	Construction Water Management Plan	
dBA	A unit of sound level which has its frequency characteristics modified by a filter (C-weighted) so as to account for the non-linear frequency response of the human ear at high noise level (typically greater than 100 decibels)	

DEFINITIONS DESIG	SNATION AND RESOURCE CONSENT CONDITIONS	
DOC	Department of Conservation	
ELMP	Ecology and Landscape Management Plan	
Establishment Work(s)	Progressively opening up and establishing the site, including: construction and/or widening of roads/tracks to access construction areas and install sediment control measures (e.g. sediment control ponds); vegetation clearance; establishment of construction yards; establishing full width access tracks/haul roads; installing remaining erosion and sediment controls; and stream diversions.	
Existing Network Utilities	All network utilities existing at the date of notification of the Notice of Requirement. Network utility has the same meaning as in section 166 of the Resource Management Act 1991	
KFG	Kaitiaki Forum Group	
LEDF	Landscape and Environment Design Framework	
NPDC	New Plymouth District Council	
Heritage New Zealand	Heritage New Zealand Pouhere Taonga	
Maternity roost	A roost occupied by two or more long tailed bats, including at least one parous, pregnant, lactating or post-lactating female long-tailed bat and/or young bat of the year	
Pest Management Area (PMA)	The 3,650ha area that will be subject to pest management measures for biodiversity offsetting and compensation purposes. For the purpose of Condition 30, the following terms are also defined in relation to the Pest Management Area: • Wider PMA: the area shown in Figure 9.2 in the ELMP, that has an area greater than 3,650ha, from which the Confirmed 3,650ha PMA may be selected through the process in Condition	
	 Intended PMA: the 3,650ha area shown in Figure 9.1 in the ELMP, that is within the Wider PMA and that may be selected as the Confirmed PMA through the process set out in Condition 30(g). Confirmed PMA: the 3,650ha area that is selected as the PMA through the process set out in Condition 30(g). Study Area: the area, including the Project Area, the Intended PMA and land beyond both, over which bats will be tracked, as shown in Figure 9.3 in the ELMP and from which the Confirmed PMA may be selected through the process set out in Condition 30(g). 	

DEFINITIONS DESIG	SNATION AND RESOURCE CONSENT CONDITIONS	
	Alternative PMA: The Waitaanga Valley, as shown in Figure 9.4 in the ELMP, that has an area greater than 3,650ha, from which the Confirmed PMA may be selected through the process set out in Condition 30(g)	
Planning Lead	New Plymouth District Council Planning Lead for the Designation Conditions	
PMP	Pest Management Plan	
Project	The construction of a new section of SH3 generally between Uruti and Ahititi, north of New Plymouth that is approximately 6km in length and located to the east of the existing SH3 alignment, comprising all associated Work in the area shown as the proposed designation in Figure 1.1 of the AEE	
Project Area	The area shown as the proposed designation in Figure 1.1 of the AEE	
Requiring Authority	NZ Transport Agency	
RMA or 'the Act'	Resource Management Act 1991	
SCWMP	Specific Construction Water Management Plan	
SH3	State Highway 3	
Stabilised Area	An area inherently resistant to erosion such as rock, or rendered resistant by the application of aggregate, geotextile, vegetation or mulch, or as identified in the Construction Water Management Plan. Where vegetation is to be used on a surface that is not otherwise resistant to erosion, the surface is considered stabilised once an 80% vegetation cover has been established.	
Stabilisation	The activity to achieve a Stabilised Area	
Stage or Staging	A stage of the Works to construct the Project as identified in the CEMP, CWMP or SCWMP	
TRC	Taranaki Regional Council	
TRoNT	Te Runanga o Ngāti Tama	
VRP	Vegetation Removal Protocol	
Work or Works	Establishment Works and Construction Works associated with the Project	
Working Day	Has the same meaning as under section 2 of the Resource Management Act 1991	

TABLE OF CONTENTS FOR DESIGNATION CONDITIONS

DESIGNATION CONDITIONS

Designation conditions for the construction of a State highway, being the Mt Messenger Bypass Project:

Ref.	Designation	Condition	NPDC (Rachelle McBeth)	DOC (Ben Inger)	Comments (disagreement
	General and	Administration			
1.	(a)	Except as modified by the conditions below, the Project shall	Agree with change	Agree with change	
		be undertaken in general accordance with the information			
		provided by the Requiring Authority in the Notice of			
		Requirement dated December 2017, the Drawing Set provided			
		at the Hearing, and the management plans dated October 2018.			
	(b)	Except for the work required under the Ecological and			
		Landscape Management Plan (ELMP) and the Pest Management			
		Plan (PMP) and in respect of the Ecological Review Panel in			
		Conditions 27 - 33 none of the conditions apply to the on-			
		going operation or maintenance of SH3 once construction is			
		complete and the new road is operational.			
	(c)	Where there is conflict between the documents listed in (a)			
		above and these designation conditions, these conditions shall			
		prevail. Where there is an inconsistency between the			
		information and plans lodged with the Notice of Requirement			
		and information provided subsequently, the most recent plans			
		and information shall prevail.			
	(d)	The Requiring Authority shall provide the Council with an			
		electronic file containing the designation boundaries in a DXF			
		(or ACAD dwg file with version noted) file.			
2.	As soon as p	practicable following Completion of Construction Works, the			
	Requiring Au	uthority shall:			
	(a)	review the extent of the area designated for the Project;			
	(b)	identify any areas of designated land that are no longer			
		necessary for the on-going operation or maintenance of SH3,			
		or the mitigation or offsetting of effects of the Project; and			
	(c)	give notice to NPDC in accordance with section 182 of the RMA			
		for the removal of those parts of the designation identified in			
		(b) above.			

3.	This condition	on is intentionally left blank	The designation shall lapse if not given effect to	
			within 10 years from the date on which it is	
			included in the New Plymouth District Plan	
			under section 175 of the RMA.	
	Cultural prof	tocols		
4.	At least thre	e months prior to the Commencement of Construction, the		
	Requiring Au	uthority shall invite mandated representatives of Ngāti Tama to		
	participate in	n a Kaitiaki Forum Group (KFG).		
	(a)	The KFG shall comprise up to 3 members who have been		
		determined by Te Runanga o Ngāti Tama (TRoNT). From time		
		to time, as appropriate, TRoNT may change the KFG		
		membership and may also invite other iwi, iwi representatives		
		or other Ngāti Tama members to attend KFG meetings. TRoNT		
		may appoint a chairperson to the KFG who would be		
		responsible for confirming any advice from the KFG to the		
		Requiring Authority and who will oversee the implementation		
		of KFG activities.		
	(b)	The purpose of the KFG is to facilitate engagement between		
		the Requiring Authority and Ngāti Tama in respect of the		
		activities authorised by this designation and to enable Ngāti		
		Tama to provide kaitiaki inputs to the design and construction		
		of the Project.		
	(c)	The KFG will be invited to hold regular meetings (monthly)		
		throughout the construction period. The KFG shall continue		
		until six months after Completion of Construction.		
	(d)	The Requiring Authority shall record the main points arising		
	(4)	from each meeting of the KFG, and shall provide a copy of that		
		record to the meeting invitees within a reasonable time		
		following the meeting.		
	The Desire			
	-	ng Authority shall, on receipt of itemised invoices, be responsible		
		Il reasonable costs associated with the attendance at KFG		
		provide the kaitiaki inputs described in Condition 4 and		
	Condition 4((a).		
4(a).	The KFG sha	II be invited by the Requiring Authority to participate in the		
	following (ar	mongst other things):		

	The development of the Project designs to incorporate cultural values into elements such as (but not limited to):	
	(i) Cultural expression in artwork on road corridor features such as the tunnel, bridge and in landscape works and plantings.	
	(ii) Water management principles.	
	(iii) Biodiversity mitigation, offset and compensation measures implemented as part of the ELMP required by Condition 27.	
	(iv) Signage of local features.	
	(v) Naming of the new highway.	
(b)	Review of the Accidental Discovery Protocol (as required by designation Condition 34) and any updates to this Protocol.	
(c)	The development and implementation of agreed cultural protocols / tikanga appropriate to stages of the works or activities (for example: blessings, accidental discoveries, vegetation clearance, relocation of animals).	
(d)	The development of cultural indicators covering matters such as (but not limited to) traditional association, mahinga kai and cultural stream health measures.	
(e)	The development and implementation of a Cultural Monitoring Plan. The purpose of the Cultural Monitoring Plan is to set out the agreed cultural monitoring requirements and measures to be implemented during construction activities, to acknowledge the historic and living cultural values of the area to Ngāti Tama and to minimise potential adverse effects on these values. The Plan shall be prepared by a person endorsed by the KFG and the Requiring Authority. Where the provisions of the Plan are not agreed by the Requiring Authority, reasons for the	

	T			
5.	(a)	The Requiring Authority shall appoint a Community Liaison		
		Person for the duration of the construction phase of the		
		Project to be the main and readily accessible point of contact		
		for persons affected by construction works. An alternative		
		contact shall be provided in the event the liaison person is		
		unavailable, to ensure that a Project contact person is available		
		by telephone 24 hours per day/seven days per week during		
		the construction phase of the Project.		
	(b)	No less than one month prior to the commencement of		
		construction, the Requiring Authority shall advise all key		
		project stakeholders listed in the CEMP of the liaison person's		
		name and contact details.		
	(c)	The Requiring Authority shall keep stakeholders and the wider		
		public informed of the construction works, progress and		
		timing and shall carry out communications in general		
		accordance with the CEMP.		
	Complaints			
	Complaints			
6.	(a)	At all times during the Works, the Requiring Authority shall		
		maintain a register of any complaints received alleging adverse		
		effects from, or related to, the Works. The record shall include:		
		(i) the name and address (where this has been provided)		
		of the complainant;		
		(ii) identification of the nature of the complaint;		
		(iii) the location, date and time of the complaint and of the		
		alleged event;		
		(iv) weather conditions at the time of the complaint (as far		
		as practicable), including wind direction and		
		approximate wind speed if the complaint relates to air		
		discharges;		
		(v) the outcome of the Requiring Authority's investigation		
		into the complaint;		
		(vi) measures taken to respond to the complaint; and		
		(vii) any other activities in the area, unrelated to the Project,		
		which may have contributed to the complaint (such as		
		non-Project construction, fires, or unusually dusty		

	conditions generally	
	conditions generally.	
(b)	When a complaint is received, the Requiring Authority shall:	
	(i) acknowledge the complaint within 2 working days;	
	(ii) promptly investigate, identify the level of urgency is	
	respect of the complaint and communicate that to the	
	complainant; and	
	(iii) take reasonable steps to remedy or mitigate the	
	matters giving rise to the complaint if there are	
	reasonable grounds for the complaint, within 10	
	working days of receiving the complaint or such sooner	
	time as may be reasonably necessary in the	
	circumstances.	
(c)	The Requiring Authority shall also maintain a record of its	
	responses and any remedial actions undertaken.	
This record	shall be maintained on site and shall be made available to the	
Planning Lea	ad (or Nominee) upon request. The Requiring Authority shall	
provide the	Planning Lead (or Nominee) with a copy of the complaints register	
every month	h.	
Advice Note	e: where for (b) and (c) there are a number of complaints relating	
to the same	e incident(s) the Requiring Authority may bundle those complaints	
together an	nd provide one response (to be provided to all complainants) in	
accordance	with those conditions.	
Outline Plan	ns	
The Requiri	ng Authority shall provide to the Council an Outline Plan (or	
Outline Plan	ns) in accordance with the provisions of s176A of the RMA for the	
following el	lements of the Project, prior to their construction:	
(a)	The tunnel control building;	
(b)	The tunnel emergency water supply tanks; and	
(c)	The bridge over the Mimi swamp forest and the bridge at or	
i	about Chainage 2400.	
Any other W	Vorks carried out in general accordance with Condition 1 shall not	
_	Vorks carried out in general accordance with Condition 1 shall not to the requirement for an Outline Plan to be submitted to NPDC.	

	of matters no	ot in accordance with Condition 1.		
	Management	t Plans - General		
8.	All Works shall Landscape and authorised by Environment documents part (a) (b) (c) (d) (e) (f) Advice note: In addition to of the manage the designate Construction Construction Management	all be carried out in general accordance with Condition 1, the nd Environmental Design Framework and the management plans by these designation conditions, which are the Construction all Management Plan (CEMP) dated [Insert] 2018 and the following provided as appendices to the CEMP: Construction Noise Management Plan (CNMP); Construction Traffic Management Plan (CTMP); Ecology and Landscape Management Plan (ELMP); Accidental Discovery Protocol (ADP); Control of a Spill Procedure; and Incident Reporting and Investigation. To the abovementioned plans, the CEMP shall also include copies gement plans required under the resource consents but not for tion, being: the Contaminated Land Management Plan (CLMP), the management Plan (CWMP) and any associated Specific in Water Management Plans (SCWMP), and the Construction Dust it Plan (CDMP). The requirements for these additional plans shall ared in accordance with the relevant Resource Consent	Agree with change	Agree with change
9.	The manager (a)	ment plans: provide the overarching principles, methodologies and procedures for managing the effects of construction of the Project to achieve the environmental outcomes and performance standards required by these conditions; and shall be maintained and implemented by the Requiring Authority during Works, and in the case of the ELMP, those matters that continue beyond the Completion of Construction Works.	Agree with proposed change	Agree with proposed change
10.	(a)	The Requiring Authority may make minor amendments to the management plans described in Condition 8 at any time. For the purpose of this condition, a 'minor amendment' is either a	Agree with change	Agree with change

,					
		small change to the content of the Management Plan which has			
		either no or a de minimis adverse environmental effect; or is a			
		change which would result in an improved environmental			
		outcome. Any changes to the management plans shall remain			
		consistent with the objectives and performance standards of			
		the management plan and the designation conditions.			
	(b)	The Requiring Authority shall submit, in writing, the minor			
		amendment to the Planning Lead (or Nominee) at least 10 days			
		before Works associated with the amendment are to be			
		implemented. The Requiring Authority shall maintain a record			
		of all minor amendments.			
	(c)	If the Planning Lead (or Nominee) considers that the			
	• •	amendment is a material amendment in accordance with			
		Condition 11, then it must notify the Requiring Authority			
		within 5 working days of receipt of the amendment and then			
		consider the amendment in accordance with Condition 11. If			
		the Requiring Authority does not receive notice from the			
		Planning Lead (or Nominee) under Condition 10(c) any Works			
		associated with the minor amendment may proceed.			
11.	(a)	The Requiring Authority may make material amendments to	Agree with change	Agree with change	
' '		the final management plans at any time subject to the			
		Certification of the Planning Lead (or Nominee). Material			
		amendment is any amendment that is in general accordance			
		with Condition 1, but is not a minor amendment in accordance			
		with Condition 10.			
	(b)	Any material amendment to the management plans shall meet			
		the objectives and performance requirements of the			
		management plan and these designation conditions.			
	(c)	In the event of an amendment to a management plan under			
		Condition 11(a), the Requiring Authority must submit, in			
		writing, the amendment to the Planning Lead (or Nominee) for			
		Certification 20 working days before the commencement of			
		the relevant Works. Certification shall confirm that the			
		amendment is in accordance with Condition 1 and meets the			
		objectives and performance requirements of the management			
		_			
		plan.			

(d) The Planning Lead (or Nominee) will carry out its best endeavors to consider the material amendment within 10 working days of receipt of the material amendment, noting that expert input, including from the Ecological Review Panel, may be required before Certification can be provided. If the Planning Lead (or Nominee) is unable to consider the material amendment within 10 working days it shall notify the Requiring Authority and advise a revised timeframe. Regardless, the Planning Lead (or Nominee) will carry out its best endeavors to consider the material amendment within a total of 20 working days of receipt. Provided that the Requiring Authority has not been advised of a revised timeframe under Condition 11(d) the Planning Lead (or Nominee) shall, no later than 10 working days of receipt of the material amendment, confirm in writing to the Requiring Authority that the material amendment is either certified or declined, or shall request that the Requiring Authority incorporate changes suggested by the Planning Lead (or Nominee). If a revised timeframe has been advised, confirmation shall be made in accordance with that timeframe. Should the Planning Lead (or Nominee) decline to certify the material amendment or request the incorporation of changes to the material amendment the Requiring Authority may then resubmit a revised material amendment to the management plan. The Certification process for a revised material amendment shall follow the same process described above in Conditions 11 (a) to (e). Any material amendment involving changes to pest management methodologies and monitoring, kiwi fencing and underpasses, and amendments to the ELMP if the PMA is selected based on Scenario 3 or Scenario 4 shall be reviewed by the Ecological Review Panel. The resolution process stipulated under Condition 14 shall be followed: Where the Requiring Authority and the Planning Lead (or Nominee) are unable to agree on the finalisation of a material amendment to a management plan; or

12.	(ii) Where the Requiring Authority considers that the Planning Lead (or Nominee) has not acted in accordance with Condition 11(d) to consider the material amendment within a reasonable timeframe. Works unaffected by the amendment may continue. This condition is intentionally left blank		
13.	All personnel involved with the construction of the Project shall be made aware of, and have access to, all conditions and management plans applicable to the construction of the Project, including any amendments to the management plans made under Conditions 10 and 11. Copies of these documents shall be kept on site at all times.		
14.	(a) In the event of any dispute arising about the content of the management plans between NPDC and the Requiring Authority, matters shall be referred in the first instance to the Planning Lead, and to the Requiring Authority's Construction Manager (as described in the CEMP), to determine a process of resolution.	Agree with change	Agree with change
	(b) If a resolution cannot be agreed under (a) within 15 working days, the matter shall be referred within 10 working days to an independent appropriately qualified expert, acceptable to both parties, setting out the details of the matter to be referred for determination and the reasons the parties do not agree.		
	(c) The expert shall, as soon as possible, issue a recommendation on the matter. The Planning Lead (or Nominee) must notify its decision to the Requiring Authority within 5 working days of receipt of the recommendation from the expert that the management plan is certified, declined, or request that the Requiring Authority incorporate changes suggested by the Council.		
15.	The Requiring Authority shall undertake an annual review of all management plans. This review shall include, but not necessarily be limited to: (a) Reviewing compliance with the Project designation conditions, the CEMP and management plans.	Agree with change	Agree with change

	(b)	Reviewing any significant changes to construction activities or		
		methods, and/or any unanticipated adverse effects resulting		
		from the Construction Works.		
	(c)	Any changes to roles and responsibilities within the Project		
		team.		
	(d)	Reviewing the results of inspections, monitoring and reporting		
	()	procedures associated with the monitoring of adverse effects		
		during construction.		
	(e)	Reviewing responses to any comments or recommendations		
	(0)	from NPDC regarding the CEMP and management plans.		
	,,			
	(f)	Reviewing responses to any comments or recommendations		
		from KFG, NPDC, DOC or the Ecological Review Panel regarding the ELMP and PMP made in the previous 12 months.		
		·		
	(g)	Reviewing any unresolved complaints and any response to		
		complaints and remedial action taken to address the		
		complaint.		
		of this review shall be provided to the Planning Lead (or		
		d a copy shall be provided to the KFG and the Operations		
	Manager of E	OOC New Plymouth District Office.		
	Where either	the Requiring Authority proposes, or the Planning Lead (or		
		quests changes to management plans as a result of the annual		
	_	hange to a management plan shall be made as soon as		
	-	nd shall be subject to the provisions of Conditions 10, 11 and		
	14.			
		w of the management plans shall cease following the Completion		
		on Works, except that review of the ELMP and PMP shall continue		
		out in accordance with the reporting and review required under		
	Condition 32			
	Advice note:	comments or recommendations regarding the CEMP and		
		plans may also be received from TRC under the resource		
	consent cond	ditions.		
	Construction	Environmental Management Plan		
6.	The Requirin	g Authority shall implement the Construction Environmental	Agree with change	Agree with change
	Management	Plan (CEMP) dated October 2018, which provides the		
	overarching	framework to ensure that the Project remains within the limits		

	and standard	ds required by these conditions and that Works appropriately	
		dy, mitigate, offset or compensate for adverse effects on the	
		The CEMP shall remain in place until the Completion of	
		. No Works with the exception of those matters of the ELMP that	
	continue bey	ond the Completion of Construction Works.	
17	The CEMP in	cludes details of:	
17.	(2)	staff and contractors' responsibilities;	
	(a)	·	
	(b)	training requirements for employees, sub-contractors and visitors;	
	(c)	environmental incident and emergency management (including	
	(C)	the procedures required under regional consent condition	
		GEN.8);

	<mark>if the Requiring Au</mark>	thority acquires the d	welling at 3072	<mark>2 Mokau Road.</mark>		
20	The Requiring Auth	ority shall implement	t the-CNMP date	ed October 2018,		
20.		w the Requiring Autho				
	construction noise	that will exceed the c	riteria in condit	tion 19. The CNMI		
	shall remain in place	e until the Completic	on of Constructi	ion Works.		
	The CNMP shall be in accordance with:					
			F t- N70 (00	2.4000 - 1		
	(a) the i	requirements of Anne	EX E TO NZS 680	3:1999; and		
	(b) the I	NZ Transport Agency	State highway o	construction and		
		ntenance noise and vi				

21.	The CNMP in	icludes:		
	(a)	the general hours of work for the Project;		
	(b)	the details of any activities that may be undertaken outside of		
		the general hours of work for the Project;		
	(c)	procedures to comply with NZS6803:1999;		
	(d)	the details of any activities that may not comply with		
		NZS6803:1999 and measures to mitigate construction noise		
		from those activities as far as practicable to ensure the effects are appropriate;		
	(e)	the necessary setbacks for specific construction plant and		
		equipment in relation to residential dwellings; and		
	(f)	the management and communication procedures for Works		
		that may not comply with NZS6803:1999.		
	Construction	Traffic Management Plan		
22.		g Authority shall implement the-Construction Traffic		
		t Plan (CTMP) dated October 2018, which identifies how the		
	Requiring Au	uthority will manage construction traffic to:		
	(a)	protect public safety;		
	(b)	minimise delays to road users;		
	(c)	minimise disruption to property access; and		
	(d)	inform the public about any potential impacts on the road		
		network.		
	The CTMP sh	nall remain in place until the Completion of Construction Works.		
23.	The CTMP in	cludes:		
	(a)	details of traffic management activities and sequencing		
		proposed for the Project;		
	(b)	methods for managing construction related traffic movements;		
	(c)	provisions to ensure that, as far as practicable, road users will		
		not be held up by construction activities for an unreasonable		
		period of time (such time period to be specified); and		
	(d)	provisions for emergency services to have access along SH3 24		
		hours per day, unless construction requires the temporary		

	1	T	T	<u></u>
		closure of a road, in which case, prior to any temporary		
		closure, an emergency action plan shall be developed and		
		agreed with emergency services to provide for access for the		
		duration of that closure.		
24.	The CTMP sh	nall comply with the version of the NZ Transport Agency Code of		
	Practice for T	Temporary Traffic Management (COPTTM) which applies at the		
	date of the C	CTMP. Where it is not possible to adhere to the COPTTM, the		
	COPTTM's pr	rescribed Engineering Exception Decision process shall be		
	followed.			
	Landscape a	nd Environmental Design Framework		
25.	The Requirin	ng Authority shall ensure that detailed design of the Project is in		
25.	general acco	ordance with the LEDF dated July 2018 including consideration of		
	the following	g:		
	(a)	Restoration planting		
	(4)			
		Extensive revegetation of riparian margins and areas of		
		pasture, as further detailed in the ELMP. The revegetation is to		
		use indigenous species eco-sourced from the area, and		
		planted to reflect natural patterns. Planting techniques are to		
		use enrichment planting to mimic succession. Revegetation is		
		to be coordinated between ecological restoration experts,		
		landscape experts and Ngāti Tama.		
	(b)	Naturalisation of stream diversions		
		Naturalising stream diversions to reflect characteristics of the		
		existing streams at each location.		
	(c)	Retention of significant trees and vegetation		
		Retaining as many significant trees (and other significant		
		vegetation) as possible close to the alignment through such		
		measures as fine-tuning the alignment and earthworks.		
	(d)	Cut batters		
		Designing cut batters to integrate with the area's landforms,		
		including echoing natural slope angles, avoiding benched cuts,		
		and treatment of rock faces to promote natural revegetation		
		over time.		

	Minimining the viewel impact of the most disease has such the	
	Minimising the visual impact of the mesh drape by avoiding drape in the lower 8m of cut faces, unless the Requiring	
	Authority determines it is required for engineering or safety	
	purposes, and exploring opportunities to configure the	
	highway cross-section that might obviate the need for the	
	mesh drape.	
(e)	Fill batters	
(6)	Till Datters	
	Treatment of fill batters to minimise footprint or merge with	
	natural contours depending on context, and revegetation of	
	batter slopes.	
(f)	Surplus fill disposal	
	Selection of sites with low visibility and low natural value for	
	the disposal of surplus fill, contouring such fill to marry with	
	natural contours, and revegetating it with indigenous bush	
	species.	
<i>(g)</i>	Bridge design	
	Detail design of the Mimi swamp forest bridge (its form and	
	finish) appropriate to its setting adjacent to a significant	
	natural area and including attention to barrier and rail design	
	to maintain views from the bridge, whilst addressing safety	
	and engineering requirements.	
	Simplifying the suite and spatial layout of 'highway furniture'	
	(such as barriers and signage poles) to minimise visual clutter.	
(b)		
(h)	Cycling shoulder	
	Detail design of the 1.5m shoulder to ensure its suitability for	
	cycling, noting that this is to be modified in the tunnel to a	
	1.2m shoulder in conjunction with a painted median.	
<i>(i)</i>	Access and stopping places	
	Reinstatement of access to the Kiwi Road Track.	
	Consideration of stopping places where acceptable.	
<i>(j)</i>	Cultural expression and kaitiakitanga	
	Expression by Ngāti Tama of their cultural presence and	
	kaitiakitanga integrated into the detailed design and	
	mitigation through such aspects as involvement in the	

		restoration of natural systems, design and finish of the tunnel portals and bridge, naming of elements (such as tunnel and bridge), and dedicating the large trees to be removed for cultural purposes.			
26.	Requiring Aut experienced la general accord shall provide to (or Nominee). Construction the Requiring	ruction of any Stage (or Stages) of the Construction Works, the chority shall arrange a peer review by a suitably qualified and andscape architect to verify that the detailed design is in dance with the LEDF and the matters listed in Condition 25, and written confirmation of such verification to the Planning Lead Upon receipt of the peer review for any Stage (or Stages) of Work the Planning Lead (or Nominee) shall confirm by writing to Authority that the requirements of this condition are met. This Condition does not apply to Establishment Works.	Agree with change	Agree with change	
	Ecology and L	andscape Management Plan			
27.	Management I Project will ava	Plan (ELMP) dated October 2018, which identifies how the roid, remedy, mitigate, offset and compensate for potential its on the ecological, landscape and biodiversity values of the ne Project Area and its surrounds, including on: vegetation / habitat (including wetlands); herpetofauna (lizards and frogs); bats; avifauna; peripatus; fish, kōura and kākahi; and streams.			
28.	The matters addressed in the ELMP are set out in Schedule 1 to these				
	(a)	accordance with a series of sub-management plans: Landscape and Vegetation Management Plan;			
	(a) (b)	Bat Management Plan;			
	(c)	Avifauna Management Plan;			
	(c) (d)	Herpetofauna Management Plan;			

	(e)	Freshwater Managemen	t Plan:			
		•	it i iaii,			
	(f)	Pest Management Plan;				
	(g)	Peripatus Management	Plan; and			
	(h)	Biosecurity Managemen	t Plan.			
28A.	(a)	Ecological Constraints N as referred to in the ELN shall show the constrain	y shall provide a complete set of Maps covering the entire Project Area, MP. The Ecological Constraints Maps Ints identified in accordance with the Ired to reflect the Stage or Staging of	Agree with change	Agree with change	
	(b)	Works shall be submitted	nts Maps for any Stage (or Stages) of ed to the Planning Lead (or Nominee) rdance with Conditions 10 or 11.			
	(c)	consequence of prepari amendment shall be su	be required to the ELMP as a ng the Ecological Constraints Maps, the bmitted to the Planning Lead (or with Conditions 10 or 11.			
	(d)		dance with this condition, the Ecological ach Stage (or Stages) of Work shall be A of the ELMP.			
	(e)	not commence until the	any Stage (or Stages) of the Project shall e Ecological Constraints Maps have anning Lead (or Nominee) and inserted			
29.	The Requirin	g Authority shall undertak	ke ecological mitigation and			
27.	biodiversity	ffset and compensation r	measures in accordance with the ELMP			
	to address th	e matters in Schedule 1 a	and to achieve the following:			
	(a)	Vegetation:				
		the highest ecol	where possible, of the vegetation with ogical value within the Project area as ures 4.1 and 4.2 of the ELMP.			
		(ii) Restoration plan	nting as follows:			
		(1) At least of	6ha of kahikatea swamp forest; and			
		(2) At least (9ha of mitigation planting using an ate mix of plant seedlings.			

(3) Planting of 200 saplings of the same species for each significant tree that is felled.

Advice note: significant trees are defined in the ELMP and shown on the Landscape Concept Plans in the LEDF

Following the completion of vegetation (4) clearance, the Requiring Authority shall measure the extent of vegetation clearance and shall reassess the extent of restoration planting required under Conditions 29(a)(ii) (2) and (3), using the methodology set out in the ELMP. The Requiring Authority shall prepare and provide a report to the Planning Lead (or Nominee) confirming the restoration planting required. If additional restoration planting is required, the extent of the restoration planting area required shall be identified and the report provided to the Planning Lead (or Nominee) for Certification that the calculation of the additional planting achieves the requirement of Conditions 29(a)(ii) (2) and (3). If the recalculation results in a lesser restoration planting area, the planting area required in Condition 29(a)(ii)(2) and (3) shall be provided.

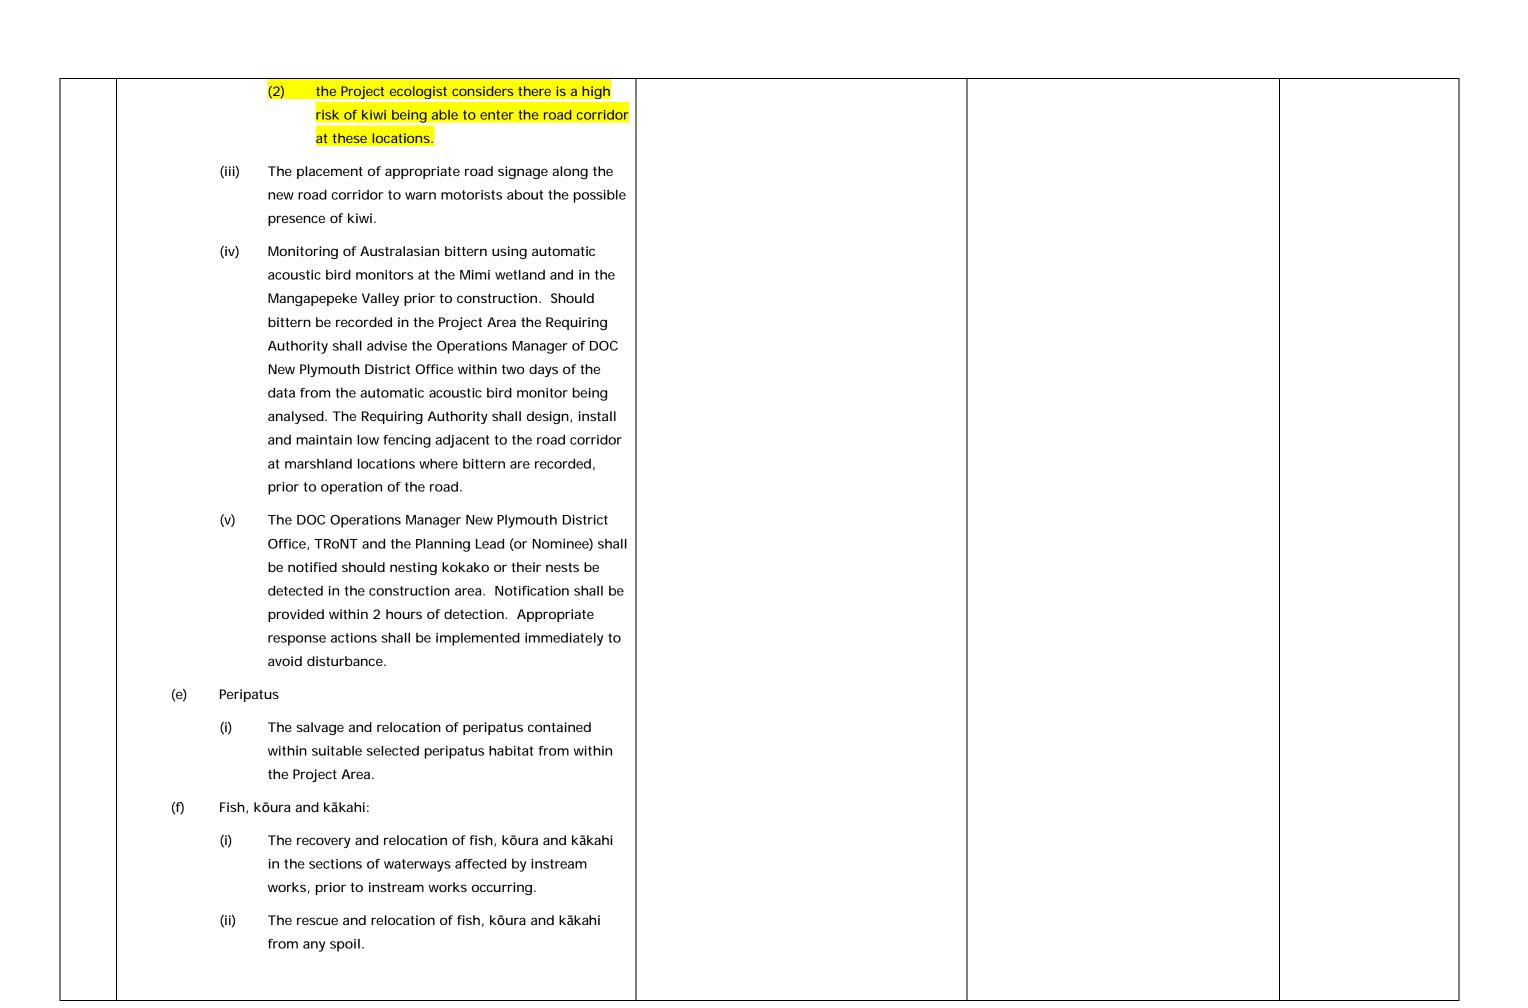

Advice Note: Certification of the report shall be carried out in accordance with the Certification process set out in Condition 11.

within three planting seasons of the Completion of Construction Works, unless natural conditions during Construction Works result in poor seed production, or poor seed condition and adversely limits seedling propagation for indigenous plant species, in which case completion would be delayed to reflect the availability of suitable seedlings. The Requiring Authority shall notify the Planning Lead (or

	Nominee) when the restoration plantings have		
	been completed.		
(6)	Should there be a delay in the completion of		
`,	restoration planting due to the availability of		
	suitable seedlings as described in (5) above, the		
	Requiring Authority shall provide the Planning		
	Lead (or Nominee) with an amended timeframe,		
	which shall not exceed three planting seasons,		
	and shall complete the planting as soon as		
	reasonably possible within the agreed		
	timeframe, informing the Planning Lead (or		
	Nominee) when planting is complete.		
(7)	For the restoration planting required under		
(*)	Condition 29(a)(ii)(1) and (2), the plantings shall		
	achieve 80% canopy cover 6 years following		
	planting in the areas where trees and shrubs		
	are planted. If 80% canopy cover is not		
	achieved at 6 years following planting, any		
	necessary replacement planting and planting		
	maintenance shall continue beyond year 6 until		
	80% canopy cover is achieved.		
(8)	For the restoration planting required under		
(0)	Condition 29(a)(ii)(1) the planting shall achieve		
	kahikatea forming 16% of the tree canopy at		
	year 10. Additional kahikatea will be planted in		
	the areas where the kahikatea contribution to		
	the canopy is less than 16%. At year 35,		
	kahikatea shall comprise 65% of the canopy in		
	the kahikatea swamp forest planting required		
	by this condition.		
(9)	For each significant tree felled, the restoration		
(7)	planting required under Condition 29(a)(ii)(3)		
	shall achieve 90% survival of the 200 planted		
	trees at 6 years following planting. If 90% plant		
	survival has not been achieved within 6 years		
	following planting, any necessary replacement		
	planting and planting maintenance shall		

		continue beyond year 6 until 90% survival is
		achieved.
(b)	Herpe	tofauna:
	(i)	The salvage and relocation of lizards from felled
	(1)	vegetation within the Project Area in accordance with
		the ELMP.
	445	
	(ii)	The Requiring Authority shall provide funding of a total
		of \$200,000 (plus GST, if any) as a contribution to one
		or more research and / or development projects where
		the outcomes are intended to benefit herpetofauna in
		the North Taranaki Ecological District. The project or
		projects to receive this funding will be nominated by
		DOC, following discussion by the Requiring Authority
		with the Operations Manager of DOC New Plymouth
		District Office and the Planning Lead (or Nominee).
	(iii)	DOC will receive, administer and distribute the funding
		required to be provided pursuant to Condition
		29(b)(ii). The Requiring Authority will make the
		funding available prior to commencing Works, and will
		provide written notice to the Planning Lead (or
		Nominee) that it has done so. Within two years of
		commencing Works, the Requiring Authority will
		provide a written update to the Planning Lead (or
		Nominee) setting out progress on how the funding has
		been allocated and will be utilised.
(c)	Bats:	
	(i)	For vegetation removal within the Project Area, the
	(-)	Vegetation Removal Protocol (VRP) set out in Annex DH
		of the 'NZ Transport Agency (the Transport Agency)
		research report 623 'Effects of land transport activities
		on New Zealand's endemic bat populations: reviews of
		ecological and regulatory literature' (Smith et al. 2017)'
		and set out in the ELMP, which includes modification to
		account for local conditions shall apply to:
		(1) all trees greater than 80cm Diameter at Breast
		Height (DBH).
		Holgin (BBH).

	 (2) all trees between 15cm and 80cm DBH which are considered by a specialist bat ecologist as having features suitable for bat roosting, such features including: i. cracks, crevices, cavities, fractured limbs, or other deformities, large enough to support roosting bat(s); ii. sections of loose flaking bark large enough to support roosting bats; iii. a hollow trunk, stem or branches; iv. deadwood in canopy or stem of sufficient size to support roost cavities or hollows; v. guano, grease marks and/or urine staining around cavity entrances; and vi. selected individual trees with high epiphyte loading (five or more perched nested epiphytes located on horizontal branches). (3) All trees shown through the bat monitoring programme (Condition 30) to be Roosts. (4) The 17 significant trees referred to in condition 29(a)(ii)(3). Advice Note: the VRP shall not apply to the removal of any			
(d)	 other vegetation. Avifauna: (i) The tracking and monitoring of kiwi prior to and during construction along the entire length of the road corridor, and the relocation of kiwi where necessary. (ii) The design, installation and ongoing maintenance of 	29(d)(ii) – Note disagreement on technical matters as outlined in the Ecology Joint Witness Statement dated 16 October 2018; that	29(d)(ii) – The design, installation and ongoing maintenance of kiwi exclusion fencing at all locations along the new road	
	kiwi exclusion fencing to restrict kiwi accessing the road at locations where: (1) the territories identified by the tracking and monitoring in (i) straddle the road corridor; and	Wildlands agree with DOC	corridor where kiwi may be able to access the road corridor, to restrict kiwi accessing the road.	

(iii) The design and installation of permanent culverts that shall maintain fish passage in all affected waterways (with the exception that maintenance of fish passage is not required at culverts 2, 10 and 13). Culvert design shall be informed by the New Zealand Fish Passage Guidelines for Structures Up to 4 Metres (2018).

(g) Streams

- (i) The design and construction of diverted streams shall be in accordance with the Stream Ecological Design Principles attached to the LEDF. 798m² of remediated stream diversions will be restored, through riparian planting, and livestock exclusion. Riparian margins of an average of 10m each side of the stream will be created and planted.
- (ii) The riparian planting and exclusion from livestock of at least 10,738m² of existing streambed area. Riparian margins of an average of 10m each side of the stream will be created and planted. Together with (i) this will create 11,536m² of stream restoration.
- Following the completion of stream works, the Requiring Authority shall measure the extent of stream works and shall reassess the extent of riparian planting required under Conditions 29(g)(ii), using the methodology set out in the ELMP. The Requiring Authority shall prepare and provide a report to the Planning Lead (or Nominee) confirming the riparian planting required. If additional riparian planting is required the extent of the riparian planting required shall be identified and the report provided to the Planning Lead (or Nominee) for Certification that the calculation of the additional planting achieves the requirement of Condition 29(g)(ii). If the recalculation results in a figure less than 10,738m² of existing streambed area the Requiring Authority shall provide planting to achieve the requirement of Condition 29(g)(ii).

29(g)(ii) and (iii) – change both from 10,738m² to 11,536m² of existing streambed area.

29(d)(ii) – disagreement on technical matters as outlined in the Ecology Joint Witness Statement dated 16 October 2018

	Advid	ce Note: Certification of the report shall be carried out in		Technical matter for
	acco	rdance with the Certification process set out in Condition		ecologists to review and
	11.			confirm position
	(iv)	The completion of all riparian planting within three		
		planting seasons of the Completion of Construction		
		Works, unless natural conditions during Construction		
		Works result in poor seed production, or poor seed		
		condition and adversely limits seedling propagation for		
		indigenous plant species, in which case completion		
		would be delayed to reflect the availability of suitable		
		seedlings. The Requiring Authority shall notify the		
		Planning Lead (or Nominee) when the riparian plantings		
		have been completed.		
	(v)	Should there be a delay in the completion of riparian		
	()	planting due to the availability of suitable seedlings as		
		described in (iv) above, the Requiring Authority shall		
		provide the Planning Lead (or Nominee) with an		
		amended timeframe, which shall not exceed three		
		planting seasons, and shall complete the planting as		
		soon as reasonably possible within the agreed		
		timeframe, informing the Planning Lead (or Nominee)		
		when planting is complete.		
	(vi)	For the riparian planting required under Condition		
	(*1)	29(g)(ii), the plantings shall achieve 80% canopy cover		
		6 years following planting in the areas where trees and		
		shrubs are planted. If 80% canopy cover is not		
		achieved at 6 years following planting, any necessary		
		replacement planting and planting maintenance shall		
		continue beyond year 6 until 80% canopy cover is		
		achieved.		
(h)	Doot			
(h)	Pest n	management:	29(h)(ii)(4) NZTA experts disagree with the	
	(i)	Pest management in perpetuity over the Pest	opinion of Wildlands' experts who seek wasp	
		Management Area (PMA) confirmed by Condition 30,	control in perpetuity.	
		being an area of 3,650ha.		
	(ii)	Pest management in the PMA shall be undertaken in		
	` '	accordance with the Pest Management Plan (PMP) in the		
		ELMP to:		

	(1) reduce and maintain rats, possums, feral cats
	and mustelids to low levels in perpetuity.
	(2) reduce and maintain feral goats and pigs to low
	densities in perpetuity.
	(3) exclude farm stock in perpetuity.
	(4) monitor and control wasps along the road
	corridor only during construction and through
	to the conclusion of a 6 year plant maintenance
	period.
(iii)	Implementation of the PMP shall commence as soon as
	practicable, and no later than one year following the
	commencement of Works.
(iv)	Pest management shall be undertaken in accordance
	with the PMP to achieve the following outcome target
	pest densities in the PMA, measured immediately prior
	to the breeding season (for bats and birds) and then
	through the critical stages when young remain in the
	roost / nest:
	(1) rat species – ≤5% tracking tunnel index.
	(2) mustelids – no detections.
	(3) cats - no detections.
	And throughout any year, to achieve the following
	outcome target pest densities in the PMA:
	(4) possums – ≤5% chew card index;
	(5) goats and deer - <1 kill per hunter/day;
	(6) feral pigs - <1 kill per hunter/day; and
	(7) farm livestock – zero presence.
(v)	Pest management shall be undertaken in accordance
	with the PMP to achieve the following outcomes for
	palatable plant species:
	(1) The recruitment of vegetation species in the
	PMA which are currently suffering ungulate
	induced recruitment failure, with the following

		species used as indicators of recruitment:				
		mahoe, hangehange, large leaved coprosma				
		spp., pate, wineberry, tawa, hinau, kamahi and				
		pikopiko.				
		(2) Recovery of condition of possum palatable trees				
		in the PMA, with the following species used as				
		indicators of recovery: swamp maire, mahoe,				
		kaikomako, northern rata and thin-barked				
		totara.				
		(vi) Pest management shall be undertaken in accordance				
		with the PMP to achieve the following outcome for				
		avifauna:				
		(1) A statistically significant 20% increase in relative				
		abundance for kiwi, tui, bellbird, kereru,				
		whitehead, long-tailed cuckoo, fernbird, and				
		North Island Robin in the PMA within 12 years				
		of the Completion of Construction Works.				
29A.	(a)	Works shall not commence until the Requiring Authority	Comfortable with proposed condition. Rachelle	(a)	Works shall not commence until the	Differences to be

shall be provided to the Planning Lead (or Nominee) prior to implementation of the PMP.

- (c) The Requiring Authority will carry out pest management within the PMA in perpetuity, and ensure that the restoration and riparian planting is protected on an ongoing basis.
- If, for the pest management measures, the legal agreements or other authorisations under Condition 29A(a) provide for a term that is time-limited, the Requiring Authority shall notify the Planning Lead (or Nominee) at least 2 years prior to the expiry of the term that a new PMA may be required to be confirmed, and shall immediately commence the process for renewing the relevant authorisations, or for confirming a new or amended PMA. Any new or amended PMA shall be confirmed following the process set out in Condition 30, with any amendments deemed necessary to Conditions 30(a) to (f), following consultation with DOC, and with the agreement of the Planning Lead (or Nominee). Any new or amended PMA must be at least 3,650 ha. The location and details for the new or amended PMA, including amendments to the ELMP, shall be certified following the process in Condition 11. The Requiring Authority shall provide written confirmation to the Planning Lead (or Nominee) that it has in place the legal agreements and/or other authorisations to carry out the PMA works.

Advice note: amendments to the bat monitoring programme may be appropriate in relation to 29A(d) if suitable information is known about long-tailed bat Maternity Roosts to recommend the location of the new PMA.

management measures, for a term of not less than 35 years.

- b. If the final location of the PMA is confirmed through the application of Scenario 4 in Condition 30, Works may commence before the Requiring Authority has in place the relevant agreements and/or other authorisations to carry out, continue and maintain pest management measures, but:
 - (i) Implementation of the PMP shall commence in accordance with Condition 29(h)(iii); and
 - (ii) The statement confirming legal agreements and/or other authorisations, required under Condition 29A(a), shall be provided to the Planning Lead (or Nominee) prior to implementation of the PMP.
- c. The Requiring Authority will carry out pest management within the PMA in perpetuity, and ensure that the restoration and riparian planting is protected on an ongoing basis.
- If, for the pest management measures, the legal agreements or other authorisations under Condition 29A(a) provide for a term that is time-limited, the Requiring Authority shall notify the Planning Lead (or Nominee) at least 2 years prior to the expiry of the term that a new PMA will may be required to be confirmed, and shall immediately commence the process for renewing the relevant authorisations, or for confirming a new or amended PMA. Any new or amended PMA shall be confirmed

	•		
			following the process set out in Condition 30, with any amendments deemed necessary to Conditions 30(a) to (f) and following consultation with DOC, and with the agreement of the Planning Lead (or Nominee). Any new or amended PMA must be at least 3,650 ha and be protected on an ongoing basis, at least 35 years. The location and details for the new or amended PMA, including amendments to the ELMP, shall be confirmed following the process in Conditions 11. The Requiring Authority shall provide written confirmation to the Planning Lead that it has in place the legal agreements and/or other authorisations to carry out the PMA works. Advice note: amendments to the bat monitoring programme may be appropriate in relation to 29A(d) if suitable information is known about long-tailed bat Maternity Roosts to
			recommend the location of the new PMA.
30.	(a)	The Requiring Authority shall implement a programme of long-tailed bat radio tracking (the" Monitoring Programme") to establish the location of long-tailed bat roosts and in particular Maternity Roosts within the Study Area. The purpose of the Monitoring Programme is to identify and define the location of the PMA based on the location of Maternity Roosts, to ensure that the intended outcomes for long-tailed bats are achieved.	
	Bat Monitoring Programme		
	(b)	The Monitoring Programme shall be carried out for one season during the period of peak long-tailed bat activity (1 October to 31 March).	
	(c)	The Monitoring Programme will confirm and map the location of long-tailed bat Maternity Roosts within the Study Area. Knowledge gained from the monitoring programme will be	

	used to confirm the location of the DMA and to identify the	
	used to confirm the location of the PMA, and to identify the	
	roost trees that will be subject to the VRPs.	
(d)	The Requiring Authority shall appoint a bat expert (the "bat	
	expert") who will manage the Monitoring Programme and	
	prepare the Bat Monitoring Report. The Requiring Authority	
	will also appoint Dr Stuart Parsons, or an alternative	
	independent peer reviewer selected by the Planning Lead (or	
	Nominee) in consultation with the Requiring Authority and	
	DOC (the "independent peer reviewer").	
(dd)	The bat expert and the bat peer reviewer shall meet the E	
	Class bat competency, as set out in Table D2 of Appendix D:	
	to 'NZ Transport Agency research report 623 'Effects of land	
	transport activities on New Zealand's endemic bat populations:	
	reviews of ecological and regulatory literature' (Smith et al.	
	2017)'. All other personnel involved in implementing the	
	monitoring programme shall meet the bat competency class of	
	D for all personnel involved in bat handling, or C2 for all	
	personnel involved in roost identification, as set out in Table	
	D2 of Appendix D: to NZ Transport Agency research report	
	623.	
(e)	The Monitoring Programme shall be undertaken in accordance	
	with the DOC best practice manual of conservation techniques	
	for bats Version 1 (DOCDM-131465), and the methodology as	
	set out in the ELMP.	
(f)	The Monitoring Programme described in Condition 30(a) shall	
	involve:	
	(i) At least 30 nights of bat trapping effort in conditions	
	suitable for bat activity;	
	(ii) The use of at least 8 harp traps, as well as mist-net	
	traps and acoustic lures;	
	(iii) an additional 10 nights of trapping should fewer than	
	10 Maternity Roosts have been identified at the	
	conclusion of 30 nights of monitoring;	
	(iv) The fitting of bats with radio transmitters, and the	
	subsequent tracking of those bats until the	
	transmitters are no longer transmitting; and	
	(v) Bat trapping may cease earlier than provided for in (i)	
	and (iii) above if 30 bats have been fitted with radio	
	transmitters and those bats have been tracked until the	
	transmitters are no longer transmitting.	

Bat Monitoring Report

- (g) On completion of the Monitoring Programme a report (the "Bat Monitoring Report") shall be prepared by the bat expert that:
 - (i) Details the methods used and the monitoring effort undertaken;
 - (ii) Sets out the findings of the Monitoring Programme;
 - (iii) Identifies the location of all identified long-tailed bat roosts, including Maternity Roosts (if found) within the Study Area; and
 - (iv) Sets out any comments received from the independent peer reviewer and any comments received from DOC's nominated bat expert regarding whether the monitoring programme has been completed in accordance with the requirements of these conditions and on the recommended location of the PMA;
 - (v) Recommends the location of the PMA in accordance with the following Scenarios 1, 2, 3 or 4.

Scenario 1:

In the event that the Monitoring Programme identifies:

- 10 or more Maternity Roosts within the Intended PMA;
- (2) 10 or more Maternity Roosts within the Study Area and 70% of these are located within the Intended PMA area shown on Figure 9.1 in the ELMP:

the Intended PMA will be the Confirmed PMA.

Scenario 2:

In the event that Scenario 1 above does not apply, but the Monitoring Programme identifies suitable bat roosting habitat that is located in the Wider PMA, the bat expert shall, in consultation with DOC's nominated bat expert, review the monitoring data and consider whether the Wider PMA supports suitable Maternity Roosts for the PMA to be set within the Wider PMA.

In doing so, the bat expert shall take into account the size and nature of the Maternity Roosts and their value to the local long-tailed bat population, along with any other relevant matters that relate to determining the suitability of the Wider PMA for bat habitat.

If after reviewing the monitoring data, the bat expert, in consultation with Mr MacGibbon, Mr Nicholas Singers and Dr John McLennan (or, if Mr MacGibbon, Mr Singers or Dr McLennan are not available, other

experts in vegetation and avifauna selected by the Requiring Authority) and DOC's nominated bat expert, considers that the Wider PMA does support suitable Maternity Roosts, the PMA may be recommended to be located within the Wider PMA.

In recommending the boundaries of the PMA the following factors will be considered:

- (a) the ability to utilise Parininihi;
- (b) the location of the identified Maternity Roosts;
- (c) retaining the Project Area and kahikatea-swamp forest plantings in the PMA;
- (d) minimising the overall length of the edge of the PMA;
- (e) minimising the length of the edge of the PMA that adjoins mature forest;
- (f) the practicality of implementing pest management, including access; and
- (g) the effectiveness of the PMA in offsetting or compensating for the effects of the Project on other ecological values, in particular vegetation and avifauna.

Scenario 3:

In the event that the majority of Maternity Roosts are discovered in the Study Area but outside of the Wider PMA, the bat expert shall, in consultation with, Mr MacGibbon, Mr Nicholas Singers and Dr John McLennan (or, if Mr MacGibbon, Mr Singers or Dr McLennan are not available, other experts in vegetation and avifauna selected by the Requiring Authority) and DOC's nominated bat expert, review the monitoring data and consider whether the Study Area supports suitable Maternity Roosts for the PMA to be recommended to be within the Study Area.

In doing so, the bat expert shall take into account the size and nature of the Maternity Roosts and their value to the local long-tailed bat population, along with any other relevant matters that relate to considering the suitability of the Study Area for bat habitat. If after reviewing the monitoring data, the bat expert, in consultation with DOC's nominated bat expert, considers that the Study Area does support suitable Maternity Roosts, the PMA may be

recommended to be located within the Study Area.

In that case, the PMA shall be 3,650 ha, and the boundaries shall be recommended by the bat expert in consultation with Mr Roger MacGibbon, Mr Nicholas Singers and Dr John McLennan (or, if Mr MacGibbon, Mr Singers or Dr McLennan are not available, other experts in vegetation and avifauna selected by the Requiring Authority) and DOC's nominated bat expert, considering the following factors:

- (a) the ability to utilise Parininihi;
- (b) the location of the identified Maternity Roosts;
- (c) minimising the overall length of the edge of the PMA;
- (d) minimising the length of the edge of the PMA that adjoins mature forest;
- (e) the practicality of implementing pest management, including access;
- (f) the effectiveness of the PMA in offsetting or compensating for the effects of the Project on other ecological values, in particular vegetation and avifauna; and
- (g) the availability of the land for inclusion in the PMA

Where the bat expert recommends that land that is both outside the Wider PMA and not administered by DOC should be included in the PMA:

(a) that land will only be included in the PMA if the Requiring Authority confirms to the bat expert that it is able to acquire the necessary rights over that land in order to carry out the pest control and related activities required in the PMA under the Pest Management Chapter of the ELMP; and

Where the bat expert (having consulted with others as required under this Scenario) considers there is no appropriate alternative for setting the PMA within the Study Area, Scenario 4 below will apply.

Scenario 4

In the event that the PMA has not been recommended to be confirmed through Scenarios 1, 2 or 3, the PMA shall be located in the Alternative PMA, or some other location agreed with DOC.

In that case, the PMA shall be 3,650 ha, and the boundaries shall be recommended by the bat expert in consultation with Mr Roger MacGibbon, Mr Nicholas Singers and Dr John McLennan (or, if Mr Roger MacGibbon, Mr Singers or Dr McLennan are not available, other experts in vegetation and avifauna selected by the Requiring Authority) and DOC's nominated bat expert, considering the following factors: the location of the known short-tailed bat Maternity Roosts, or should the Requiring Authority seek to establish the PMA elsewhere, the location of long-tailed bat Maternity Roosts determined through a further radio-tracking study, the scope of which would be equivalent to the programme described in Condition 30(b) - (f).; minimising the overall length of the edge of the (b) minimising the length of the edge of the PMA that adjoins mature forest; the practicality of implementing pest management, including access; the effectiveness of the PMA in offsetting or compensating for the effects of the Project on other ecological values, in particular vegetation and avifauna; the availability of the land for inclusion in the PMA; and other pest control undertaken by DOC that may act as a buffer to the PMA. The Bat Monitoring Report prepared under Condition 30(g) shall be provided to DOC and the KFG for comment. Should DOC and / or the KFG have comments on the report they shall be provided to the Requiring Authority within 15 working days of receipt of the Report. The Bat Monitoring Report prepared under Condition 30(g), and any comments from DOC and / or the KFG, shall be provided to the independent peer reviewer who shall review the Report and provide an assessment of the findings,

including whether:

(i) The monitoring programme has been completed in accordance with the requirements of these Conditions; and (ii) The PMA has been recommended to be located in accordance with the provisions of Condition 30(g). If the independent peer reviewer is unable to confirm the matters described in Condition 30(i)(i) and 30(i)(ii), the independent peer reviewer shall make recommendations to the Requiring Authority that address any concerns. The Requiring Authority shall provide the peer review assessment to DOC and the KFG for comment. The Requiring Authority must consider any comments on the assessment that are provided by DOC or the KFG within 10 working days of receipt of the
accordance with the requirements of these Conditions; and (ii) The PMA has been recommended to be located in accordance with the provisions of Condition 30(g). If the independent peer reviewer is unable to confirm the matters described in Condition 30(i)(ii) and 30(i)(ii), the independent peer reviewer shall make recommendations to the Requiring Authority that address any concerns. The Requiring Authority shall provide the peer review assessment to DOC and the KFG for comment. The Requiring Authority must consider any comments on the assessment that are provided by DOC or the KFG within 10 working days of receipt of the
and (ii) The PMA has been recommended to be located in accordance with the provisions of Condition 30(g). report.
The Requiring Authority shall consider the peer review
assessment and any comments from DOC and the KFG and
shall update the Bat Monitoring Report prepared under
Condition 30(g), including identifying how any comments from
the peer reviewer, DOC or the KFG have been addressed. If
required, the Bat Management Chapter and the Pest
Management Chapter of the ELMP shall be updated to reflect
the findings of the Bat Monitoring Report.
The Bat Monitoring Report and any amendments to the ELMP
shall be provided to the Planning Lead (or Nominee), for
Certification that the recommended PMA is the Confirmed
PMA. Certification of the Bat Monitoring Report and any
amendment to the ELMP shall be carried out in accordance
with the Certification process set out in Condition 11.
If the PMA has been recommended in accordance with
Scenario 3 or Scenario 4, the Planning Lead (or Nominee) shall
seek advice or recommendations from the Ecological Review
Panel as part of the Certification process under Condition
30(k).
If the PMA has been recommended in accordance with
Scenario 4, the amendment to the ELMP shall address how the
residual ecological effects of the Project are offset or
compensated for at the Alternative PMA, including the residual
effects on long-tailed bats, avifauna and vegetation.
A copy of the final certified Bat Monitoring Report and any
changes to the ELMP shall be provided to DOC and the KFG.

	(m)	The Requiring Authority shall implement the findings of the			
		final Bat Monitoring Report and Bat Management and Pest			
		Management ELMP Chapters, including the location of the			
		PMA, in accordance with Condition 29(h)(iii).			
	(n)	Works shall not commence until Conditions 30(a) to 30(l) have			
		been met.			
	(o)	For the avoidance of any doubt, the final PMA shall be a single			
		3,650 ha area, unless otherwise agreed by the Transport			
		Agency.			
31.		f the ecological mitigation and biodiversity offset and			
		n measures required in Conditions 29(a) to (h) shall be			
		y the Requiring Authority in accordance with the details set out			
	in Schedule 1				
32.	(a)	The Requiring Authority shall prepare an annual monitoring	Agree with change	Agree with change	
02.		report describing the findings of all monitoring undertaken			
		in the previous 12 months pursuant to Condition 31. The			
		annual monitoring report shall be prepared by a suitably			
		qualified ecologist. This report shall include an assessment			
		of the effectiveness of the ELMP in achieving compliance with			
		the measures required in Condition 29 and Schedule 1, and if			
		necessary, the actions to be undertaken to achieve			
		compliance with Condition 29 and Schedule 1, including			
		identifying any necessary updates required to the ELMP. The			
		Requiring Authority shall provide a copy of the annual report			
		to the KFG and DOC. The report shall be submitted to the			
		Planning Lead (or Nominee).			
	(b)	Annual reporting under Condition 32(a) shall cease one year			
		following Completion of Construction Works other than			
		monitoring to assess the effectiveness of the PMP.			
	(6)	Reporting on the monitoring undertaken pursuant to			
	(c)	Condition 31 to assess the effectiveness of the PMP in			
		achieving compliance with Conditions 29(h)(iv) to (vi) shall be			
		undertaken as follows:			
		undertaken as follows.			
		(i) Vegetation reporting – three reports in total, to be			
		prepared following the 1st, 3rd and 5th year after the			
		Completion of Construction Works.			
1	I.		I .	<u>'</u>	

(ii) Avifauna reporting – four reports in total, to be prepared following the 3rd, 6th, 9th and 12th year after the Completion of Construction Works. (iii) Pest management reporting – at the end of every year after the Completion of Construction Works, on an ongoing basis.	
after the Completion of Construction Works. (iii) Pest management reporting – at the end of every year after the Completion of Construction Works, on an	
(iii) Pest management reporting – at the end of every year after the Completion of Construction Works, on an	
after the Completion of Construction Works, on an	
ongoing basis.	
(d) If necessary, the report shall identify any actions required to	
achieve compliance with Condition 29(h)(iv) to (vi), including	
identifying any updates required to the ELMP. The reporting	
shall be submitted to the Planning Lead (or Nominee) within	
3 months of the completion of the monitoring. A copy of the	
report shall be provided to TRoNT and DOC.	
(e) If the reporting required by Condition 32(a) identifies that	
actions are required to achieve compliance with Condition	
29(h)(iv) to (vi) the Requiring Authority shall update the ELMP	
in accordance with the recommendations of the monitoring	
report within 2 months of the completion of the monitoring	
report. Any amendment to the ELMP shall be dealt with in	
accordance with Conditions 10 or 11. The Requiring	
Authority shall implement any amendments to the ELMP	
made in accordance with this Condition.	
Ecological Review Panel	
33. (a) As soon as practicable following confirmation of the Agree with change, noting that Ms McBeth Agree with change	
designation the Requiring Authority shall establish an expert considers that clause (c) is unnecessary	
ecological review panel. The expert panel shall:	
(i) Comprise three suitably qualified experts with skills in	
ecology and pest management. DOC, TRoNT, and the	
Requiring Authority shall each be invited to provide	
one member for this panel, whose names shall be	
agreed with the Planning Lead (or Nominee). From time	
to time, and if requested by the panel by agreement of	
all members, the Planning Lead (or Nominee) may	
appoint an additional expert in any or all of the	
following areas of ecology: terrestrial vegetation,	
terrestrial invertebrates, herpetofauna, avifauna, bats,	
freshwater ecology, or pest management to assist the	

	· -	I in its functions. Any such additional expert pane
		bers shall not be employees of either DOC, TRON
	or th	e Requiring Authority.
(ii)	Provi	de expert advice and recommendations to the
	Plann	ning Lead (or nominee) if such advice is required
	by Co	ondition 11 or otherwise determined to be
	requi	ired by the Planning Lead (or Nominee). This shall
	inclu	de:
	(1)	Reviewing any material amendments to the
	(1)	ELMP under Condition 11.
		ELIVIF UTICE CONCINION 11.
	(2)	Reviewing the location and design of kiwi
		exclusion fencing, provided in accordance with
		Condition 29(d)(i).
	(3)	Reviewing the pest management methods to be
	(-)	employed in the PMA.
	(4)	
	(4)	Reviewing the results of pest monitoring and
		any changes to the pest management methods
		in the PMP needed to achieve the pest densities
		set out in Condition 29(h)(iv).
	(5)	Reviewing the reporting required under
		Condition 32.
	(6)	Reviewing the Bat Monitoring Report if Scenario
	(0)	3 in Condition 30(g) is used to recommend the
		PMA.
		I IVIA.
	(7)	Reviewing the Bat Monitoring Report, and any
		necessary amendments to the ELMP, if Scenario
		4 in Condition 30(g) is used to recommend the
		PMA. If the PMA has been recommended in
		accordance with Scenario 4, the Ecological
		Review Panel shall consider:
		A. Whether the Panel requires additional
		expertise to assess the Bat Monitoring
		Report. If the Panel considers additional
		expertise is required, experts shall be
		expertise is required, experts stidil be

1			
			appointed in accordance with Condition
			33(a)(i).
		В.	Whether the residual ecological effects
			of the Project are offset or compensated
			for at the Alternative PMA, including the
			residual effects on long-tailed bats,
			avifauna and vegetation.
			avitadita and vegetation.
		C.	Whether the amendments made to the
			ELMP in relation to the Alternative PMA,
			and in particular to the Pest
			Management Plan, will offset or
			compensate for the Project's residual
			effects and achieve the objectives stated
			in Schedule 1 and in the ELMP. The
			Ecological Review Panel may recommend
			amendments to the ELMP.
		D.	Prior to recommending any amendments
		D.	to the ELMP in accordance with
			Condition 33(a)(ii)(7)C above, the
			Ecological Review Panel shall consult
			with the experts employed by the
			Requiring Authority to prepare the Bat
			Monitoring Report and the amendments
			to the ELMP.
		(iii) Before engag	ging the expert panel the Planning Lead (or
		Nominee) mu	ust notify the Requiring Authority.
	(1-)	On many last of an item	ata at tanata at ha Danatata a Aath antha at all all

Accid	aentai Di	scovery Protocol	
4. The F	Requiring	g Authority shall rely o	on P45, the NZ Transport Agency
	dental Di	scovery Protocol and i	implement that protocol throughout
Work	s. P45,	the Transport Agency	Accidental Discovery Protocol, shall be

			T	T	<u> </u>
	reviewed by t	the KFG and modified to:			
	(a)	reflect the site specific Project detail; and			
	(b)	be consistent with any archaeological authority issued by			
		Heritage New Zealand under the Heritage New Zealand			
		Pouhere Taonga Act 2014 applying to the Project.			
	Advice Note:				
	The Ministry	for Culture and Heritage must also be advised of any artefact			
	finds within 2	28 days of the discovery in accordance with the Protected			
	Objects Act 1	1975. The final repatriation of artefacts is a matter for the			
	Ministry of C	ulture and Heritage in consultation with iwi.			
35.	The Accident	al Discovery Protocol referred to in condition 34 shall not apply,			
	and need not	be implemented, in the event that:			
	(a)	the Project is subject to an archaeological authority granted			
		under section 48 of the Heritage New Zealand Pouhere Taonga			
		Act 2014 (or the corresponding provision in any legislation			
		replacing that Act); and			
	(b)	that authority provides for a protocol to be implemented in the			
		event of discovery of cultural or archaeological artefacts or			
		features during the construction of the Project, including the			
		matters provided in condition 34.			
	Advice Note:	The purpose of this condition is to ensure consistency between			
		ions and the conditions imposed on any archaeological authority			
	under the He	eritage New Zealand Pouhere Taonga Act 2014.			
	Advice note:	Archaeological Authority 2019/057 was granted by Heritage			
		Pouhere Taonga on 28th August 2018. Implementation of the			
		uld meet the requirements of Condition 35(a) and (b).			
	Access				
36.	The Requiring	g Authority shall, as far as reasonably practicable, maintain			
	access to the	Kiwi Road and Mt Messenger Tracks during construction.			
37.	The Requiring	g Authority will ensure that reasonable vehicular access is			
	maintained d	uring the Project to the properties currently served by the			
	section of SH	3 that will be bypassed or otherwise affected by the Project.			
	Network utili	ties			
					1

38.	National Cod	the designation shall be undertaken in accordance with the le of Practice for Utility Operators' Access to Transport Corridors			
	(September 2	2016), or any approved update to that code.			
	Construction	Lighting			
39.	The Requiring Authority shall implement procedures at all times during construction to manage lightspill (if any) to residential properties from any night lighting that is required on the site, in accordance with AS 4282 – 1997 "Control of the Obtrusive Effects of Outdoor Lighting". Construction lighting shall also be managed in a manner which reduces, to the extent that is reasonably practicable, adverse light overspill effects on nocturnal fauna.				
	Operational I	Lighting			
40.	shall be designification	alled at the tie-ins points with the existing SH3 and the tunnel gned and screened to minimise the amount of light overspill and received at residential dwellings and to reduce adverse effects on er nocturnal fauna. The Requiring Authority shall: Demonstrate that all lighting designed in accordance with "Road lighting Standard AS/NZS1158"; and Provide written verification to the Planning Lead from an ecologist that the lighting has been designed to reduce adverse effects on nocturnal fauna.	McBeth] Lighting sh points with on revocati Management necessary to the future of the	all only be installed at the tie-ins the existing SH3 following a decision on under the Land Transport int Act 2003, if it is considered by the Requiring Authority based on use of the road. 	notification shall include a list of the Construction Works		
	completed, and be accompanied by maps to show the location		
	of the completed works. This shall include the identification of:		
	(i) areas of landscaping and reinstatement; and		
	(ii) all areas of restoration and riparian plantings required		
	under Condition 29(a)(ii) and 29(g)(ii) and notice of		
	whether the plantings have been completed.		
	(b) If Completion of Construction Works is to occur more than six		
	months following the operation of the new State highway		
	commencing, the Requiring Authority shall notify the Planning		
	Lead (or Nominee) of the expected date for Completion and		
	Construction Works. This date shall be no more than 18		
	months following the operation of the new road.		
	Upon receipt of the notice of under 43(a) the Planning Lead (or Nominee)		
	shall confirm in writing to the Requiring Authority that the requirements of		
	this condition are met.		
	Kiwi Road Track Access Parking		
44.	Unless otherwise agreed with the Planning Lead (or Nominee), prior to the		
	Completion of Construction Works the Requiring Authority shall construct a		
	carpark area to provide parking for the users of the Kiwi Road Track. This		
	carpark area shall be in accordance with the drawing titled "Indicative Carpark		
	Layout", reference MMA-DES-GEM-E1-FIG-0022 Rev A.		
		Refer paragraph 59 of Ms McBeth's Statement to	Peter Roan does not
		Commissioner Daysh dated 9 October 2018 for	accept this proposed
		further detail in relation to the proposed	condition. The Transport
		condition relating to revocation of SH3 as	Agency's lawyers will
		follows -	provide further legal
		Status of existing road no longer needed as	direction on this matter.
		state highway	
		(a) Prior to any decision being made	
		on the future status of the	
		existing road over Mt Messenger,	
		the Requiring Authority shall:	
		(i) consult with New Plymouth	
		District Council's Manager	

	Transportation and all owners
	and occupiers of land adjoining
	the bypassed road, and other
	parties with access rights or other
	interests in the affected area,
	about options to ensure that
	access is provided to the affected
	properties, assets and interests
	and that such access is suitable
	for its future use; and
	ii) provide a report on the
	outcomes of the consultation to
	NPDC for the purpose of ensuring
	that NPDC is fully informed of the
	views of the affected persons and
	interests, and of the Requiring
	Authority's intended response to
	that consultation.
(b)	Before any part or parts of the
	existing road's State highway
	status is revoked and any parts of
	the bypassed route are vested in
	any person or the Council, the
	Requiring Authority shall carry
	out the necessary works to
	ensure the existing road is (and
	any alternative new accessways
	are) fit for its future use.
(c)	The Requiring Authority shall
	have particular regard to the
	likely the ongoing maintenance
	costs of the existing road and any
	alternative new accessways
	before making a decision as to
	what type of surface treatment
	will be fit for its future use.

	(d) The Requiring Authority shall
	maintain the bypassed route (and
	any alternative new accessways)
	for five years following revocation
	of its State highway status, to a
	standard consistent with its
	decisions in (b) and (c) above.

SCHEDULE 1: REQUIREMENTS ADDRESSED IN THE ELMP

- 1. Overarching objectives and matters addressed in the ELMP
- a) The objectives of the Ecology and Landscape and Management Plan (ELMP), dated [insert], are to:
 - i. identify how the potential adverse effects of the Project on the ecological, landscape and biodiversity values within the Project Area and its surrounds will be avoided, remedied, mitigated, offset and compensated for, including on: vegetation / habitats (including wetlands); herpetofauna (lizards and frogs); bats; avifauna; peripatus; fish, kōura and kākahi; and streams; and
 - ii. achieve a net gain in biodiversity after the residual effects on biodiversity have been offset or compensated for.
- b) The ELMP includes a summary of the ecological and landscape values and effects of the Project.
- c) The ELMP comprises a series of sub-management plans that address the designation and resource consent conditions, including: Landscape and Vegetation Management Plan; Bat Management Plan; Avifauna Management Plan; Herpetofauna Management Plan; Freshwater Management Plan; Pest Management Plan; Peripatus Management Plan; and Biosecurity Management Plan.
- d) The ELMP also describes:
 - i. The physical mechanisms (e.g. fences) to protect the restoration and riparian planting from clearance and / or livestock, on an ongoing basis.
 - ii. The necessary rights to carry out the restoration and riparian planting, and to carry out the required pest management where these activities are to occur on land that is not owned by the Requiring Authority.
 - iii. The measures proposed for biosecurity management, including the management of risk associated with myrtle rust, and the management of pest plants and pest animals.
- e) The ELMP includes maps showing:
 - existing vegetation types for all areas of proposed mitigation plantings,
 to determine if these will result in habitat gain;
 - ii. the location and extent of the stream reaches proposed for restoration works;
 - iii. the location and extent of the Intended PMA.
- f) The ELMP contains details of monitoring and reporting to the Planning Lead (or Nominee) prior to, during and post-construction to determine if the ELMP objectives and the performance measures are being met, including a repeatable monitoring design incorporating adaptive management responses.
- g) The ELMP includes details of the roles and responsibilities of key staff responsible for implementing the ELMP and procedures for training of contractors and other Project staff regarding the ELMP.
- h) ELMP includes details of the process for reviewing and amending the Plan, in accordance with the Conditions of the Designation and Resource Consents.
- 2. Landscape and Vegetation Management Plan

Specific objectives

The Landscape and Vegetation Management Plan addresses:

- a) Details of the method for a pre-construction survey of wetland vegetation composition and structure to assist planning for the swamp forest restoration planting.
- b) The retention, where possible, of the high value ecological areas identified in Figures 4.1 and 4.2 in the ELMP dated [insert date] 2018.

- c) Provisions for the relocation or cultivation of threatened plants found within the Project Area.
- d) Details of how, prior to vegetation removal, the appropriate delineation of vegetation to be cleared will be made.
- e) A programme for vegetation clearance that allows for vegetation to be cleared only prior to Works beginning in any particular Stage (or Stages) of the Project Area in order to reduce habitat effects and reduce the potential for erosion and sediment generation.
- f) The staging of restoration planting and landscape treatments in relation to the construction programme to reduce the potential for erosion and sediment generation. Where practicable restoration planting shall commence after the completion of any Stage of Construction Work.
- g) Provisions for the cultural use of significant trees by Ngāti Tama.
- h) The supervision of vegetation clearance by a suitably qualified person.
- i) Landscaping design and treatments (landform and planting), including rehabilitation of all areas used for temporary work and construction yards.
- j) The location, details and principles for achieving the following restoration planting, including identification (maps) of where the restoration planting will take place:
 - i. At least 6 hectares of kahikatea swamp forest.
 - ii. At least 9ha of mitigation planting using an appropriate mix of plant seedling.
 - iii. Planting of saplings in ecologically appropriate sites at a loss to replacement ratio of 1:200 on a 'like for like' species basis for each significant tree that is felled.
 - iv. All new plantings must be eco-sourced from the North Taranaki Ecological District.
 - v. The Requiring Authority shall complete all restoration planting within three planting seasons of the Completion of Construction Works, unless natural conditions during Construction Works result in poor seed production, or poor seed condition and adversely limits seedling propagation for indigenous plant species, in which case completion would be delayed to reflect the availability of suitable seedlings.
 - vi. Should there be a delay in the completion of restoration planting due to the availability of suitable seedlings as described in v above, the Requiring Authority shall provide the Planning Lead (or Nominee) with an amended timeframe, which shall not exceed three planting seasons, and shall complete the planting as soon as reasonably possible within the agreed timeframe, informing the Planning Lead (or Nominee) when planting is complete.
- k) Provisions to monitor and manage all planting so that plants establish and those that fail to establish are replaced, such that the listed performance measures are met within their specified timeframes.

Performance measures

- I) The Landscape and Vegetation Management Plan addresses the following performance measures.
 - i. For each significant tree felled, 90% survival of the 200 planted trees required by j)iii at 6 years following planting. If 90% plant survival has not been achieved within 6 years following planting, any necessary replacement planting and planting maintenance shall continue beyond year 6 until 90% survival is achieved.
 - ii. 80% canopy cover 6 years following planting for all restoration planting required by j)i and j)ii, in the areas where trees and shrubs are planted. If 80% canopy cover is not achieved at 6 years following planting, any necessary replacement planting and planting maintenance shall continue beyond year 6 until 80% canopy cover is achieved.
 - iii. For kahikatea swamp forest planting required by j)i, kahikatea forming 16% of the tree canopy at year 10. Additional kahikatea will be planted

in the areas where the kahikatea contribution to the canopy is less than 16%.

iv. 65% canopy cover at year 35 for kahikatea swamp forest planting required by j)i.

Monitoring

The Landscape and Vegetation Management Plan includes the following survey and monitoring requirements.

- m) Provision to measure the extent of actual vegetation clearance within 6 months following the completion of Establishment Works and to reassess the extent of restoration planting required under j)ii and j)iii. The Requiring Authority shall prepare and provide a report to the Planning Lead (or Nominee) confirming the restoration planting required to achieve the amount specified under j)ii and j)iii. If additional restoration planting is required, the extent of the restoration planting required shall be identified in the report. If the recalculation results in lesser restoration planting area than that specified in j)ii and j)iii, the restoration planting shall remain as that required under j)ii and j)iii. The report shall be provided to the Planning Lead (or Nominee) for Certification that the additional planting is in accordance with the restoration planting required under j)ii and j)iii.
- n) Provision to undertaken post-construction monitoring of vegetation condition for all restoration planting to demonstrate that the performance measures for the Landscape and Vegetation Management Plan have been met. The monitoring shall be undertaken, as required, until such time as all of the performance measures have been shown to be achieved.
- 3. Bat Management Plan

Specific objectives

The Bat Management Plan addresses the following matters:

- a) Provision for a long-tailed bat radio tracking programme to identify long-tailed bat roost locations and confirm the PMA location.
- b) Vegetation Removal Protocols (VRP) for :
 - i. the 17 significant trees.
 - ii. all other trees that are ≥80 cm Diameter at Breast Height (DBH), and trees between 15cm and 80cm DBH which are considered by a specialist bat ecologist as having features suitable for bat roosting, including:
 - (1) cracks, crevices, cavities, fractured limbs, or other deformities, large enough to support roosting bat(s);
 - sections of loose flaking bark large enough to support roosting bats;
 - (3) a hollow trunk, stem or branches;
 - (4) deadwood in canopy or stem of sufficient size to support roost cavities or hollows;
 - (5) guano, grease marks and/or urine staining around cavity entrances; and
 - (6) selected individual trees with high epiphyte loading (five or more perched nested epiphytes located on horizontal branches).
- iii. all trees shown through the bat monitoring programme to be Roosts. Advice Note: the VRP shall not apply to the removal of any other vegetation.
- c) When Automatic bat detectors (ABMs) are used to determine the presence of bats around potential roost trees, provision for monitoring to occur for a minimum of three consecutive nights.
- d) Provision for consultation with the DOC Operations Manager New Plymouth District Office to discuss appropriate actions if a bat roost remains occupied for longer than 7 days.

e) Other than the amendments made through a) to c) above, the VRP shall be in accordance with Annex DH of the 'NZ Transport Agency (the Transport Agency) research report 623 'Effects of land transport activities on New Zealand's endemic bat populations: reviews of ecological and regulatory literature' (Smith et al. 2017)' and set out in the ELMP after modification to account for local conditions.

Performance outcomes

f) The performance outcomes for bats will be achieved by the successful implementation of the VRP and by pest management in the PMA (refer to Pest Management Plan).

Monitoring

- g) There are no specific monitoring requirements for bats, other than those associated with the implementation of the VRP and the monitoring for pest management in the PMA.
- 4. Avifauna Management Plan

Specific objectives

The Avifauna Management Plan addresses the following matters;

- a) Measures to detect and protect kiwi from the likelihood of direct mortality during the construction and operation of the road, including:
 - A North Island brown kiwi radio-tracking programme, prior to and during construction, along the entire length of the road corridor, conducted by a suitably qualified ecologist.
 - ii. Provision for the capture and relocation of kiwi and/or their eggs during construction, if deemed appropriate by the kiwi expert, and in accordance with DOC best practice for kiwi (2018).
 - iii. Based on the outcome of radio-tracking and the identification of kiwi territories, details on the design, installation and ongoing maintenance of kiwi exclusion fencing at locations where:
 - (1) the territories identified by the tracking and monitoring in(i) straddle the road corridor; and
 - (2) the Project ecologist considers there is a high risk of kiwi being able to enter the road corridor at these locations.

This will direct kiwi to culvert locations where they can underpass beneath the road during low stream flow conditions. The design and location of these fences shall be discussed with the DOC Operations Manager New Plymouth District.

- iv. Provision for the placement of appropriate road signage along the new road corridor to warn motorists about the possible presence of kiwi.
- b) Measures to provide for the detection of kōkako in the construction area and to prevent disturbance from construction, along with measures outlining the subsequent actions to be taken that avoid disturbance in the event that any nesting kōkako or their nests be detected within the Project Area. Notification shall be provided to DOC Operations Manager New Plymouth District Office, TRONT, and the Planning Lead (or Nominee) within 2 hours of kokako being detected. Appropriate response actions shall be implemented immediately to avoid disturbance.
- c) Monitoring of Australasian bittern using automatic acoustic bird monitors at the Mimi wetland and in the Mangapepeke Valley prior to construction. If bittern are detected, notification must be provided to the DOC Operations Manager New Plymouth District Office within two days of the data from the automatic acoustic bird monitor being analysed. The Requiring Authority shall design, install and maintain low fencing adjacent to the road corridor at marshland locations where bittern are recorded, prior to operation of the road.

Performance outcomes

d) The performance outcomes for avifauna will be achieved by the successful implementation of the measures outlined above under a) to c) for kiwi, kōkako

The approach to kiwi fencing is a matter of technical disagreement as outlined in the Ecology Joint Witness Statement (refer to Condition 29(d)(ii)

and Australasian bittern and by pest management in the PMA (refer to Pest Management Plan).

Monitoring

The Avifauna Management Plan includes the following survey and monitoring requirements:

- e) Details of up to 1 year of post-construction monitoring utilising motion detection cameras deployed at selected locations to assess the effectiveness of the exclusion fences and use of the culvert underpasses by kiwi.
- f) Details of a survey involving the placing of automatic acoustic bird monitors for bittern in the Mimi wetland and Mangapepeke Valley in the spring of 2018.
- g) Additional avifauna monitoring associated with the Pest Management Plan is set out in Section 7 below.
- 5. Herpetofauna Management Plan

Specific objectives

The Herpetofauna Management Plan addresses the following matters:

- a) Provision for (limited) salvage effort for lizards that may be located on vegetation cleared within the Project Area, focusing on high value habitat and known lizard locations. The provisions shall also include details on the relocation and release of salvaged striped skink at the Rotokare Scenic Reserve and other lizards into the PMA.
- b) Provision for the development of a management plan for Hochstetter's frog (*Leiopelma aff. hochstetteri*) and Archey's frog (*Leiopelma archeyi*), if they are discovered in the Project Area.

Performance outcomes

c) The performance outcomes for herpetofauna will be achieved by the successful implementation of the salvage measures outlined in a) above.

Monitoring

- d) The Herpetofauna Management Plan includes: provision for recording the details of any salvaged lizards, including: species, sex, age class, weight, snout to vent length, and location of capture and release. All records shall be reported to the BioWeb Herpetofauna database.
- 6. Freshwater Management Plan

Specific objectives

The Freshwater Management Plan addresses the following matters:

- a) The design and construction of reinstated and diverted streams in accordance with the Stream Ecological Design Principles attached to the LEDF. 798m² of remediated stream diversions will be restored, through riparian planting, and livestock exclusion. Riparian margins of an average of 10m each side of the stream will be created and planted.
- b) The measures to maintain fish passage in all affected waterways as a result of permanent culverts (with the exception of culverts 2, 10 and 13), which shall be informed by the New Zealand Fish Passage Guidelines for Structures Up to 4 Metres (2018).
- c) Riparian planting and exclusion from livestock of at least 10,738m² of existing stream within the Mimi and Mangapepeke catchments. Riparian margins of an average of 10m each side of the channel shall be created and planted. Together with (a) this will create 11,536m² of stream restoration. Should culvert or stream diversion lengths be increased in the detailed design stage of the Project, the length of riparian planting required shall be re-calculated using the same Stream Ecological Valuation (SEV) method used to derive the 10,738m² figure (note that provisions are addressed in the Landscape and Vegetation Management Plan).

Some matters related to the Freshwater Management Plan are matters of technical disagreement as outlined in the Ecology Joint Witness Statement. Refer to alternative wording for '6. Freshwater Management Plan' in Schedule 1 of the conditions attached to Ben Inger's supplementary evidence.

- d) The Requiring Authority shall complete all riparian planting within three planting seasons of the Completion of Construction Works, unless natural conditions during Construction Works result in poor seed production, or poor seed condition and adversely limits seedling propagation for indigenous plant species, in which case completion would be delayed to reflect the availability of suitable seedlings.
- e) Should there be a delay in the completion of riparian planting due to the availability of suitable seedlings as described in d) above, the Requiring Authority shall provide the Planning Lead (or Nominee) with an amended timeframe, which shall not exceed three planting seasons, and shall complete the planting as soon as reasonably possible within the agreed timeframe, informing the Planning Lead (or Nominee) when planting is complete.
- f) Fish Recovery and Rescue Protocols, including addressing:
 - i. How the recovery and relocation of fish, kōura and kākahi will occur prior to instream works.
 - ii. How the rescue of fish, koura and kakahi will occur from any spoil.
 - iii. The qualifications and experience required for fish recovery/rescue work.
 - iv. Details of fish recovery, relocation and rescue methods to be used.

Advice Note: Details of the water quality monitoring, response process and measures to address potential adverse effects of sediment and other contaminant discharges to waterways during construction, including streams and wetlands, are set out in the Construction Water Management Plan and the Construction Water Discharges Monitoring Plan.

Performance outcomes

The Freshwater Management Plan includes the following performance measures:

- g) Provision of fish passage through all permanent culverts, except culverts 2, 10 and 13.
- h) Implementation of stream diversions and riparian planting to achieve successful colonisation by aquatic biota, and to match existing habitat types compared with the original stream reach affected.
- i) For the riparian planting required by (c) the plantings shall achieve 80% canopy cover 6 years following planting in the areas where trees and shrubs are planted. If 80% canopy cover is not achieved at 6 years following planting, any necessary replacement planting and planting maintenance shall continue beyond year 6 until 80% canopy cover is achieved.

Monitoring

The Freshwater Management Plan includes the following survey and monitoring requirements:

- j) Provision for monitoring the fish passage performance after peak upstream migration (August – December) upstream of culverts 9, 15 and 18 annually for two years after construction is completed. The monitoring will be used to determine if recruitment is occurring by assessing if a suitable age structure (juvenile and adult fish) is present within the fish population above culvert 9 and culvert 15. If after 2 years the recruitment of young fish is not occurring then refinements to the culvert fish passage devices will be made.
- k) Provision for monitoring of macroinvertebrates and fish at 3 selected locations in each of the Mangapepeke and Mimi catchments.
 - i. Pre-construction and construction phase fish monitoring will be undertaken during base flow conditions at least two weeks following any large flood event in spring (October to December) and summer (February to April). Fish surveys will use methods consistent with the New Zealand freshwater fish sampling protocols (Joy et al. 2013). Fish will be identified, counted and lengths recorded.
 - ii. Pre-construction and construction phase aquatic macroinvertebrate monitoring will be undertaken during base flow conditions at least two

weeks following any large flood event in spring (October to December) and summer (February to April). Aquatic macroinvertebrate surveys will use methods consistent with Protocols for sampling macroinvertebrates in wadeable streams (Stark et al. 2001. For each site the area sampled and type of stable habitat sampled will be recorded. The following metrics will be calculated from the aquatic macroinvertebrate data: taxa richness, Macroinvertebrate Community Index (MCI), Quantitative Macroinvertebrate Community Index (QMCI), %EPT taxa and %EPT abundance. EPT (Ephemeroptera-Plecoptera-Trichoptera) metrics will exclude the species Oxyethira and Paroxyethira. Following at least one year of baseline monitoring and one year of construction monitoring, aquatic macroinvertebrate monitoring will be reduced to annual monitoring if there is less than 20% change in QMCI or MCI comparable to baseline sampling.

- I) Provision for pre-construction and construction phase sediment deposition monitoring at a site within the raupo reedland, downstream of the Mimi Stream tributary draining the tunnel portal, located upstream of the Mimi swamp forest. This involves monitoring change in sediment accumulation e.g. artificial astroturf attached to a tray. The purpose of the monitoring is to assess sediment deposition that might extend from the end of the stream to the Mimi swamp forest. The monitoring will follow selected heavy rain events prior to the commencement of construction and in response to specific rainfall events during construction (set out in the Construction Water Discharge Monitoring Programme in Appendix C of the CWMP).
- 7. Pest Management Plan

Specific objectives

The Pest Management Plan addresses the following matters:

- a) The identification of the confirmed location for the 3,650ha Pest Management Area (PMA).
- b) Within the PMA, to:
 - reduce and maintain rats, possums, feral cats and mustelids to low levels in perpetuity.
 - ii. reduce and maintain feral goats and pigs to low densities in perpetuity.
 - iii. exclude farm stock in perpetuity.
 - iv. monitor and control wasps along the road corridor during construction and through to the conclusion of a 6 year plant maintenance period.
- c) To generate biodiversity benefits within the PMA across a wide range of plants and animals.
- d) An adaptive management approach to enable pest management techniques to be modified if target pest densities and the performance outcomes for avifauna identified below are not met.

Performance outcomes

The Pest Management Plan includes the following performance measures:

- e) The following target pest densities in the PMA, measured immediately prior to the breeding season (for bats and birds) and then through the critical stages when young remain in the roost / nest:
 - i. rat species ≤5% tracking tunnel index;
 - ii. mustelids no detections;
 - iii. cats no detections;

And throughout any year, the following target pest densities in the PMA:

- a. possums \leq 5% chew card index;
- b. goats and deer <1 kill per hunter/day;
- c. feral pigs <1 kill per hunter/day; and
- d. farm livestock zero presence.
- f) For palatable plant species:

- i. The recruitment of vegetation species which are currently suffering ungulate induced recruitment failure. Indicator species will include: mahoe, hangehange, large leaved coprosma spp., pate, wineberry, tawa, hinau, kamahi and pikopiko.
- ii. Recovery of condition of possum palatable trees. Indicator species will focus on measuring changes in foliage density of small trees such as; swamp maire, mahoe, kaikomako, northern rata and thin-barked totara.
- g) A statistically significant 20% increase in relative abundance for kiwi, tui, bellbird, kereru, whitehead, long-tailed cuckoo, fernbird, and North Island Robin in the PMA within 12 years of the Completion of Construction Works.

Monitoring

The Pest Management Plan includes the following survey and monitoring requirements within the PMA.

- h) Provision for monitoring pest levels to assess performance targets and enable adaptive management processes in the event targets are not met.
- Provision for a quantitative assessment of canopy condition and understorey condition to establish pre-pest management and post-pest management vegetation condition knowledge for the PMA, including the composition and abundance of palatable vegetation.
- j) Provision for monitoring avifauna prior to commencement of pest management in the PMA to establish a relevant baseline, including for kiwi, kōkako, forest birds and fernbird.
- k) Provision for outcome monitoring of kiwi, tui, bellbird, kereru, whitehead, long-tailed cuckoo, fernbird, North Island Robin conducted for 12 years, at 3-yearly intervals, following the onset of the pest management measures.
- 8. Peripatus Management Plan

Specific objectives

The Peripatus Management Plan addresses the following matters:

a) The specific procedures to avoid, remedy or mitigate adverse effects associated with the construction and operation of the Project on peripatus species through salvaging peripatus contained within suitable selected peripatus habitat into a suitable relocation site outside of the Project Area.

Performance outcomes

The Peripatus Management Plan includes the following performance measures:

b) To salvage peripatus contained within suitable selected peripatus habitat locate and capture peripatus from the proposed Project Area, and to successfully relocated it at predetermined release sites, immediately adjacent to the Project Area, with minimal stress caused to the animals.

Monitoring

- c) There are no specific monitoring requirements for peripatus.
- 9. Biosecurity Management Plan

Specific objectives

The Biosecurity Management Plan addresses the following matters:

- a) The biosecurity measures to avoid the likelihood of spread or introduction of invasive pest plants and pest animals as a result of Project-related activities.
- Specific provisions for the minimisation of spread of Myrtle Rust onto and along the Project Area;
- Measures to avoid the introduction to the Project Area of invasive pest plants and animals with nursery produced seedlings

Performance outcomes

d) Non-detection in the planting areas of pest plants and pest animals.

Monitoring

The Biosecurity Management Plan includes the following survey and monitoring requirements within the Project Area:

- e) Provision for pest plant and pest animal surveillance to be carried out by suitably qualified personnel within the Project Area and at restoration planting areas for the first growing season of any new plantings.
- f) Before-delivery inspections by suitably qualified personnel for invertebrate and plant pests at the premises of supplier nurseries of plant material being grown for planting in the Project Area and mitigation sites.
- g) Before construction walk-through survey of the Project Area by suitably qualified personnel to identify plant and animal pests and plant diseases already present.

SCHEDULE 2: Kiwi Road Track Access - Indicative Layout Drawing

DRAFT NPDC RESOURCE CONSENTS AND ASSOCIATED CONDITIONS

RESOURCE MANANGEMENT (NATIONAL ENVIRONMENTAL STANDARD FOR ASSESSING AND MANAGING CONTAMINANTS IN SOIL TO PROTECT HUMAN HEALTH) REGULATIONS 2011 (NES)

	Contaminated Land Management Plan
1.	The Consent Holder shall implement the Contaminated Land Management Plan (CLMP) dated [insert]. The CLMP shall remain in place until the Completion of Construction Works.
2.	The CLMP is, and shall remain, in general accordance with Ministry for the Environment Contaminated Land Management Guideline No. 1: Reporting on Contaminated Sites in New Zealand (Revised 2011). The CLMP includes procedures to manage the effects of contaminated or potentially contaminated soils on human health and the environment during ground disturbance activities, including the following: (a) site establishment procedures; (b) classification of soil to be disturbed; (c) soil management procedures for off-site disposal; and (d) unexpected discovery of contaminated material protocol and requirement to record and track placement of any such material if reused on-site.
3.	On receipt of an itemised invoice, the Consent Holder shall pay to the New Plymouth District Council all the administration, monitoring and supervision costs of these consents, fixed in accordance with section 36 of the Resource Management Act, 1991.
4.	Pursuant to section 125(1) of the Act, the consent referenced [to insert – NPDC reference numbers] shall lapse 10 years from the date of commencement of the consents in accordance with section 116 of the Act.
