

APPENDIX I3

NOTABLE TREES

- 13.1 Criteria for determining significance of NOTABLE TREES
- 13.2 Categories of NOTABLE TREES
- 13.3 Schedule of NOTABLE TREES

13.1 Criteria for determining significance of NOTABLE TREES

The COUNCIL has developed the NOTABLE TREE Evaluation Method to assess NOTABLE TREES in the New Plymouth District. This method uses key elements from STEM (Standard TREE Evaluation Method) and the RNZIH (Royal New Zealand Institute of Horticulture) method, adapting them so they are relevant to the New Plymouth District context. All of the TREES that are included in the District Plan are considered to be notable for their historical, botanical, landscape, amenity or cultural value.

The COUNCIL'S NOTABLE TREE Evaluation Method asks the arborist performing the assessment to consider key questions. Under each question there are specific elements to which the arborist must allocate a score of 1, 2, 3 or 4 (1 being the lowest, 4 being the highest). These key questions and elements are outlined below, along with an explanation of the corresponding scores. When a single TREE is evaluated for notable status, questions 1-5 are considered. When a group of TREES is evaluated for notable status, questions 1-6 are considered.

1 IS THE TREE A GOOD SPECIMEN?

- a) **Stature:** This element measures the trunk diameter (girth) of the TREE to provide general information about the TREE'S health and growth rate. It also measures the HEIGHT and width of the TREE in metres. A final score is obtained by doubling the HEIGHT and then adding the width (2 x HEIGHT + width) to give the TREE size in square metres. The resulting figure is used to allocate a score. Note: Girth is measured at 1.4m from ground level, multi stems are measured and added together to make the girth, only stems over 250mm in diameter are measured.
- Scores: 1 = 1-25m².
2 = 26-60m².
3 = 61-85m².
4 = 86+m².
- b) **Form or Shape*:** (*Characteristic appearance of the TREE in relation to its species). This element addresses the overall appearance of the TREE. The following aspects are considered:

- Canopy.
- Branching framework.
- Trunk.
- Buttresses.
- Root system.
- Special appeal – such as low sweeping branches or root growth.

Scores: 1 = Poor.
2 = Fair.
3 = Good.
4 = Excellent.

- c) **Life expectancy:** This element considers the potential longevity of the TREE species specifically in the New Plymouth District, given the optimum conditions for growth. It also considers the resistance to local disease.

Scores: 1 = 0-30 years.
2 = 31-60 years.
3 = 61-90 years.
4 = 91+ years.

- d) **Health and vigour:** This element diagnoses the apparent health of the TREE. It considers whether the TREE looks healthy in foliage, branch and bark. It also considers whether there are any bad wounds or lacerations that may be susceptible to infection or decay.

Scores:

- 1 = Terminal Decline – TREE is definitely in irreparable decline through disease and severe structural collapse, TREE is dead or senescent.
- 2 = Condition/Illness – TREE has poor health but with careful management can be effectively brought back to a self sustaining state of health.
- 3 = Moderate Health – TREE is of good health with no significant health issues but is not regarded as being exceptionally good.
- 4 = Good Health – TREE is very healthy and has no cause for health concern at this point in time.

- e) **Structural integrity:** This element looks at the TREE'S structural condition such as wounds or fractures of bark and limbs. It examines whether the TREE can withstand breakage or collapse. It also investigates species wood strength, past failure and failure likelihood.

Scores:

- 1 = Failure Imminent – existing splits, cracks, structural decay, wounds indicating internal failure slumpage.
- 2 = Major Defects – large cavities, root wounds, bark inclusions in leader and large scaffolds, excessively heavy growth, heavy lean and large dead limbs.
- 3 = Minor Defects – small cavities, bark inclusions in branch unions, slight leans, minor root wounds, natural deadwood content.
- 4 = Appears Sound – free of visual structural defects.

Note: If a TREE scores 1 in this category it is automatically not notable.

2 DOES THE TREE HAVE VISUAL/LANDSCAPE VALUE?

- a) **Prominence of position:** This element assesses the TREE'S visual effect from any given location. It considers the prominence of the TREE in its location and the number of viewers.

- Scores:
- 1 = Site only.
 - 2 = Local landscape.
 - 3 = Surrounding landscape.
 - 4 = Landmark.

- b) **Presence of other TREES:** This element identifies whether the tree is a solitary specimen or if it forms part of a group.

- Scores:
- 1 = 10+ TREES.
 - 2 = 5-9 TREES.
 - 3 = 2-5 TREES.
 - 4 = Solitary.

- c) **Role in location:** This element assesses the visual and spatial role of the TREE in its setting. The following aspects are taken into account:

- Amenity contribution.
- Contribution to the setting.
- Scale, framing, softening.
- Serenity to an urban or open space.
- Purpose in concealing or enhancing a desirable or undesirable view.

- Scores:
- 1 = Minor significance.
 - 2 = Significant.
 - 3 = Very significant.
 - 4 = Major significance.

3 DOES THE TREE HAVE HERITAGE VALUE?

- a) **Historic:** This element recognises TREES that are associated with, or have been planted to commemorate, an historical event. These include TREES that have historic associations with people and places and are important to the city, district or New Zealand.

- Scores:
- 1 = Unknown.
 - 2 = Minor.
 - 3 = Important.
 - 4 = Very important.

Note: If a TREE scores 4 in this category it is automatically notable.

- b) **Cultural:** This element recognises TREES that have spiritual, cultural or other associations.

- Scores:
- 1 = Unknown.
 - 2 = Minor.
 - 3 = Important.
 - 4 = Very important.

- c) **Approximate age of TREE:** This element considers the age of the TREE. Special merit is given to older TREES. Added weight may be given to remnant TREES because of their intrinsic value to a particular ecosystem, or when a relict TREE exists in an environment that has changed from that which is typical for that TREE species.

Scores: 1 = 0-25 years.
2 = 26-50 years.
3 = 51-75 years.
4 = 75+ years.

4 DOES THE TREE HAVE BOTANICAL/RARITY VALUE?

- a) **Occurrence of the species:** This element assesses the occurrence of the TREE species, based on the number of TREES found within the local area. TREES that are rare in the New Plymouth District and have adapted to their environment are given special weighting.

Scores: 1 = Very common.
2 = Common.
3 = Infrequent.
4 = Rare.

Note: If a TREE scores 4 in this category it is automatically notable.

- b) **Botanical value:** This element relates to the uniqueness and rarity of the species, i.e. generic purity, propagation, collection value, species variation, etc. It considers whether the TREE has collection value or species variation. TREES without great stature or even common species could be of great botanical interest.

Scores: 1 = Minor significance.
2 = Significant.
3 = Very significant.
4 = Major significance.

5 IS THE TREE MANAGEABLE IN ITS LOCATION?

- a) **TREE in relation to nearby services and structures:** This element assesses the manageability of the TREE. It considers whether the TREE is in a suitable location, whether the TREE requires continued maintenance and if it is able to be maintained practically. The following questions are asked regarding the TREE:

- Is it clear of aerial and subterranean services?
- Is it clear of structures (including buildings)?
- Is it clear of activity areas?
- Is it creating excess shading difficulties?
- Is its root range affecting nearby services and structures?
- Is it within falling distance of targets?

Scores: 1 = Unmanageable.
2 = Potentially unmanageable.
3 = Easily managed.
4 = No conflicts.

Note: If a TREE scores 1 in this category it is automatically not notable.

6 WHAT IS THE CONTRIBUTION OF THE GROUP?

- a) **Ecological/climatic environment contribution (groups only):** This element assesses the microclimate functions of the group and how important the group is ecologically. The following aspects are examined:

- Soil stabilisation.
- Noise amelioration.
- Shelter and shade.
- Native ecological significance.
- Exotic/cultured ecological significance.
- Wildlife habitat.
- Remnant.
- Successional example.

Scores: 1 = Minor function.
2 = Functional.
3 = Very functional.
4 = Major function.

- b) Stand landscape value (groups only):** This element looks at the overall significance of the group in its environment. It considers whether the group is visually significant, whether it acts as a screen or buffer, and whether it contributes to a city-wide theme or green network.

Scores: 1 = Minor significance.
2 = Significant.
3 = Very significant.
4 = Major significance.

13.2 Categories of NOTABLE TREES

Category 1: TREES of outstanding historical, botanical, landscape, amenity or cultural value in the district. They are listed in Schedule 13.3 as “Category 1” trees and are subject to rules in this District Plan.

Category 2: TREES of significant historical, botanical, landscape, amenity or cultural value in the district. They are listed in Schedule 13.3 as “Category 2” trees and are subject to rules in this District Plan.

13.3 Schedule of NOTABLE TREES

DP Item	DP Map No.	Site Address	Legal Description	Botanical Name	Common Name	No. of Trees	Category
1	E7	Autawa Road Inglewood District	Road Reserve	Populus Nigra "Italica" Avenue	Poplar	72	1
2	E8	771 Autawa Road Inglewood District	Sects 12, 21 & 22 Blk IV Huiroa SD	Sequoia Sempervirens	Californian Redwood	40	2
3	C25	Autere Street New Plymouth	Lot 2 DP 19957	Metrosideros Excelsa	Pohutukawa	3	2
